SCOPE OF THE MARKET RESEARCH

Selected Product	Cocoa Waste
Product HS Code	1802
Detailed Product Description	1802 - Cocoa; shells, husks, skins and other cocoa waste
Selected Country	Germany
Period Analyzed	Jan 2019 - Sep 2025

LIST OF SOURCES

- GTAIC calculations based on the UN Comtrade data
- GTAIC calculations based on data from the World Bank, the International Monetary Fund, the Heritage Foundation, the World Trade Organization, the UN Statistical Division, the Organization of Economic Cooperation and Development
- GTAIC calculations based upon the in-house developed methodology and data coming from all sources used in this report
- Google Gemini AI Model was used only for obtaining companies
- The Global Trade Alert (GTA)

1

PRODUCT OVERVIEW

PRODUCT OVERVIEW

This section provides an overview of industrial applications, end uses, and key sectors for the selected product based on the HS code classification.

P Product Description & Varieties

This HS code covers the by-products of cocoa processing, specifically the outer layers and other residues left after the cocoa beans have been extracted. These include cocoa shells, husks, and skins, which are typically removed during the roasting and winnowing stages of chocolate production. It also encompasses other cocoa waste generated during the manufacturing process.

I Industrial Applications

- Used as a raw material for animal feed due to its fiber and residual nutrient content.
- Processed for the extraction of residual cocoa butter, theobromine, or other valuable compounds.
- Utilized as biomass fuel for energy generation in industrial settings.
- Incorporated into compost and fertilizer formulations as a soil conditioner.
- Used in the production of mulch for gardening and horticulture.

E End Uses

- Animal feed ingredient for livestock and poultry.
- Organic fertilizer and soil amendment for agricultural and horticultural applications.
- Biofuel for heating and electricity generation.
- Flavoring or coloring agent in some food products (e.g., dark breads, beverages).
- Ingredient in cosmetic and pharmaceutical products (e.g., for antioxidant properties).

S Key Sectors

- Animal Feed Industry
- Agriculture and Horticulture
- Bioenergy Sector
- Food and Beverage Industry (as a minor ingredient or flavoring)
- Cosmetics and Pharmaceuticals (for extractives)

2

KEY FINDINGS

KEY FINDINGS – EXTERNAL TRADE IN COCOA WASTE (GERMANY)

Germany's imports of Cocoa Waste (HS 1802) experienced a significant contraction in the latest 12-month (LTM) period, Oct-2024 – Sep-2025, with both value and volume declining. This downturn follows a period of fast-growing value imports driven by sharply rising prices, despite a long-term decline in import volumes.

Import volumes continue long-term decline, despite recent price surge.

LTM (Oct-2024 – Sep-2025) import volume: 2,997.02 tons (-23.64% YoY). 5-year CAGR (2020-2024) volume: -26.85%.

Oct-2024 – Sep-2025

Why it matters: Germany's market for Cocoa Waste is characterised by a structural decline in physical demand, indicating reduced industrial usage or increased domestic sourcing. Exporters should anticipate a shrinking volume market, necessitating a focus on value-added offerings or cost efficiencies to maintain competitiveness.

Rapid decline

Long-term volume decline and recent LTM contraction.

Record high proxy prices observed amidst declining volumes.

LTM (Oct-2024 – Sep-2025) average proxy price: US$2,446.0/ton (+19.61% YoY). One record high monthly price in the last 12 months.

Oct-2024 – Sep-2025

Why it matters: The market is experiencing significant price inflation, with proxy prices reaching record levels. This suggests supply constraints or strong demand for specific quality grades, allowing suppliers to command higher margins despite lower volumes. Importers face increased costs, impacting profitability unless passed on to end-users.

Record high prices

One record high monthly price in the last 12 months.

Sharp recent moves in prices

LTM proxy price up 19.61% YoY.

KEY FINDINGS – EXTERNAL TRADE IN COCOA WASTE (GERMANY)

Germany's imports of Cocoa Waste (HS 1802) experienced a significant contraction in the latest 12-month (LTM) period, Oct-2024 – Sep-2025, with both value and volume declining. This downturn follows a period of fast-growing value imports driven by sharply rising prices, despite a long-term decline in import volumes.

Market concentration remains high, with France dominating imports.

France held 84.63% of import value and 46.7% of import volume in LTM (Oct-2024 – Sep-2025).

Oct-2024 – Sep-2025

Why it matters: Germany's Cocoa Waste import market is highly concentrated, with France as the overwhelming primary supplier. This poses a concentration risk for German importers, making them vulnerable to supply disruptions or price changes from a single source. New entrants face a significant challenge in displacing established players.

Rank	Country	Value	Share	Growth
#1	France	6.2	84.63	-12.0

Concentration risk

Top-1 supplier (France) holds >50% of import value and volume.

Significant price disparity exists among major suppliers.

LTM (Oct-2024 – Sep-2025) proxy prices: Japan US$14,789.5/ton, France US$3,640.2/ton, Netherlands US$1,362.2/ton.

Oct-2024 – Sep-2025

Why it matters: A barbell price structure is evident, with Japan supplying at a premium and the Netherlands at a significantly lower price point. This indicates diverse product specifications or quality tiers within Cocoa Waste. Importers can optimise sourcing strategies based on their specific quality and cost requirements, while suppliers must clearly define their market positioning.

Supplier	Price	Share	Position
Japan	14,789.5	2.1	premium
France	3,640.2	46.7	mid-range
Netherlands	1,362.2	41.1	cheap

Price structure barbell

Ratio of highest to lowest price among major suppliers is >3x.

KEY FINDINGS – EXTERNAL TRADE IN COCOA WASTE (GERMANY)

Germany's imports of Cocoa Waste (HS 1802) experienced a significant contraction in the latest 12-month (LTM) period, Oct-2024 – Sep-2025, with both value and volume declining. This downturn follows a period of fast-growing value imports driven by sharply rising prices, despite a long-term decline in import volumes.

Japan and Netherlands emerge as key growth contributors in LTM.

Japan's LTM value imports grew by US$245.7K (+123.6% YoY), Netherlands by US$102.4K (+36.5% YoY).

Oct-2024 – Sep-2025

Why it matters: Despite the overall market decline, Japan and the Netherlands are driving growth in absolute terms, indicating shifting supplier dynamics. Japan's significant growth at premium prices suggests a niche for high-value offerings, while the Netherlands' growth at lower prices points to cost-effective supply. Exporters should monitor these shifts for potential partnership or competitive threats.

Rapid growth

Japan and Netherlands show strong growth in LTM value imports.

Emerging suppliers

Japan and Netherlands are increasing their share and value significantly.

Several smaller suppliers demonstrate rapid growth from a low base.

Guatemala (+776.4% YoY value growth), Colombia (+306.9% YoY value growth), and Switzerland (+158.4% YoY value growth) in LTM (Oct-2024 – Sep-2025).

Oct-2024 – Sep-2025

Why it matters: While their absolute contributions are small, the explosive growth rates from these suppliers signal potential new sourcing opportunities or emerging competitive threats. Importers could explore these sources for diversification or cost advantages, especially if their pricing is favourable. Exporters should be aware of these agile, fast-growing competitors.

Rapid growth

Guatemala, Colombia, and Switzerland show triple-digit YoY value growth.

Emerging suppliers

These countries are growing rapidly, potentially indicating new market entrants or increased focus on the German market.

Conclusion

The German Cocoa Waste market presents a complex landscape of declining volumes but rising prices, with opportunities for suppliers offering either premium or cost-effective solutions. Importers face concentration risks and should explore emerging, fast-growing suppliers for diversification and competitive pricing.

3

GLOBAL MARKET TRENDS

GLOBAL MARKET: SUMMARY

Global Market Size (2024), in US$ terms	US$ 0.03 B
US$-terms CAGR (5 previous years 2019-2024)	5.78 %
Global Market Size (2024), in tons	76.18 Ktons
Volume-terms CAGR (5 previous years 2019-2024)	-5.74 %
Proxy prices CAGR (5 previous years 2019-2024)	12.23 %

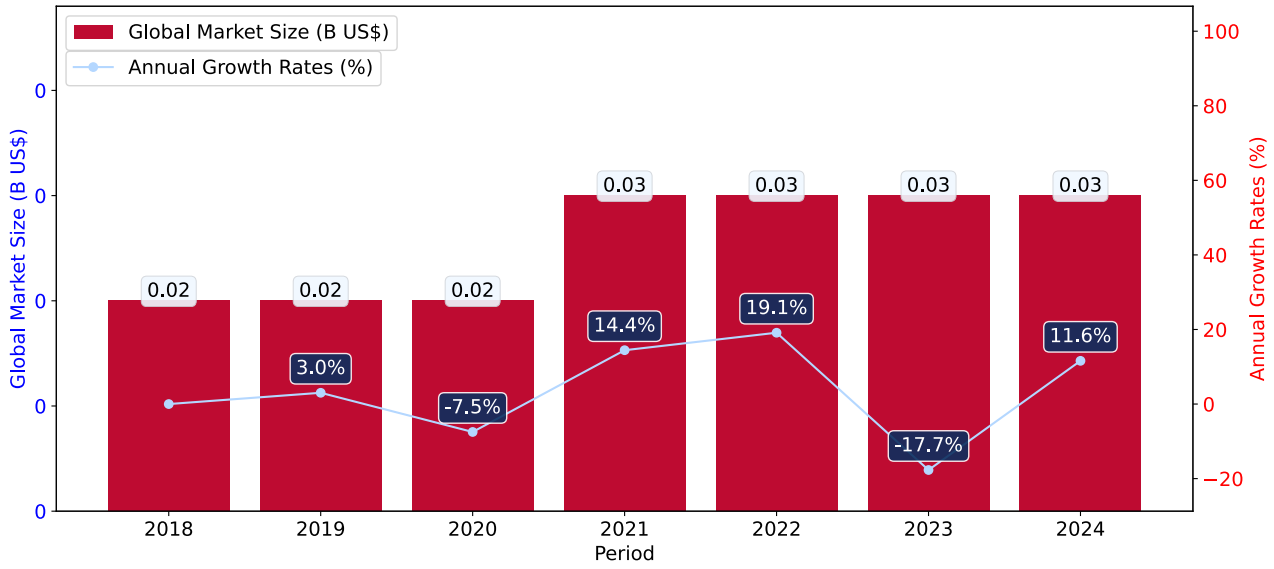
GLOBAL MARKET: LONG-TERM TRENDS

This section describes the development over the past 5 years, focusing on global imports of the chosen product in US$ terms, aggregating data from all countries. It presents information in absolute values, percentage growth rates, long-term Compound Annual Growth Rate (CAGR), and delves into the economic factors contributing to global imports.

Key points:

i. The global market size of Cocoa Waste was reported at US$0.03B in 2024.
ii. The long-term dynamics of the global market of Cocoa Waste may be characterized as growing with US$-terms CAGR exceeding 5.78%.
iii. One of the main drivers of the global market development was decline in demand accompanied by growth in prices.
iv. Market growth in 2024 outperformed the long-term growth rates of the global market in US$-terms.

Figure 1. Global Market Size (B US$, left axes), Annual Growth Rates (%, right axis)



a. The global market size of Cocoa Waste was estimated to be US$0.03B in 2024, compared to US$0.03B the year before, with an annual growth rate of 11.59%
b. Since the past 5 years CAGR exceeded 5.78%, the global market may be defined as growing.
c. One of the main drivers of the long-term development of the global market in the US$ terms may be defined as decline in demand accompanied by growth in prices.
d. The best-performing calendar year was 2022 with the largest growth rate in the US$-terms. One of the possible reasons was growth in prices.
e. The worst-performing calendar year was 2023 with the smallest growth rate in the US$-terms. One of the possible reasons was biggest drop in import volumes with slow average price growth.

The following countries were not included in the calculation of the size of the global market over the last six years due to irregular provision of annual import statistics to the UN Comtrade Database (Top 10 countries with irregular data provision): Burkina Faso, Tunisia, Gambia, Viet Nam, Lithuania, Djibouti, Peru, Saudi Arabia, Zambia, Uzbekistan.

GLOBAL MARKET: LONG-TERM TRENDS

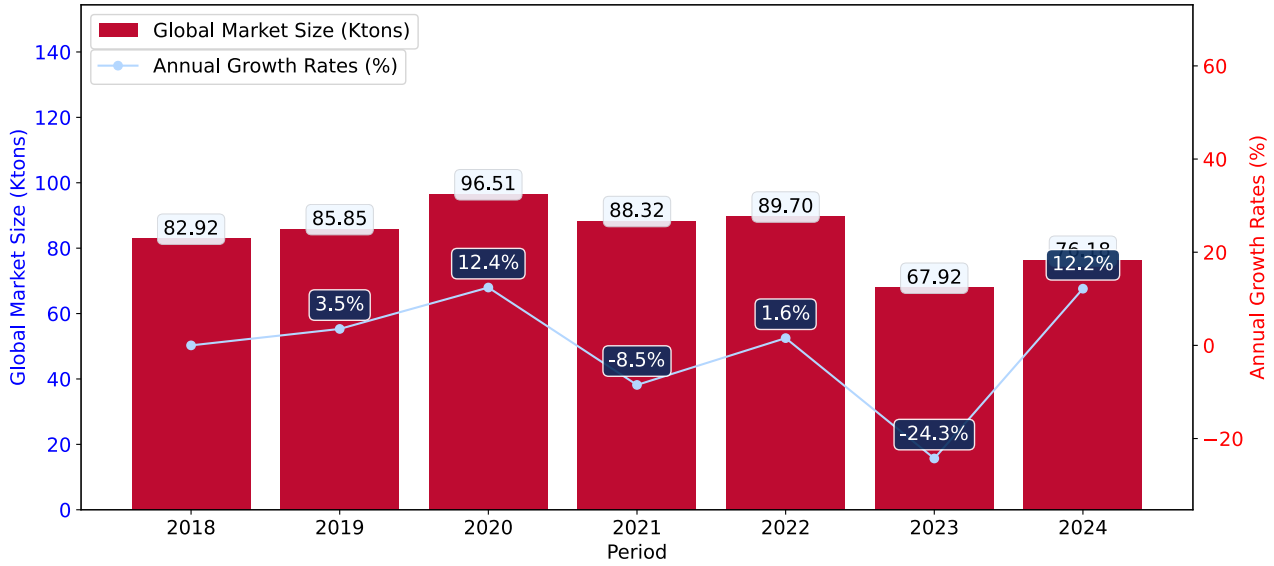
This section provides an overview of the global imports of the chosen product in volume terms, aggregating data from imports across all countries. It presents information in absolute values, percentage growth rates, and the long-term Compound Annual Growth Rate (CAGR) to supplement the analysis.

Key points:

i. In volume terms, global market of Cocoa Waste may be defined as stagnating with CAGR in the past 5 years of -5.74%.

ii. Market growth in 2024 outperformed the long-term growth rates of the global market in volume terms.

Figure 2. Global Market Size (Ktons, left axis), Annual Growth Rates (%, right axis)



a. Global market size for Cocoa Waste reached 76.18 Ktons in 2024. This was approx. 12.17% change in comparison to the previous year (67.92 Ktons in 2023).

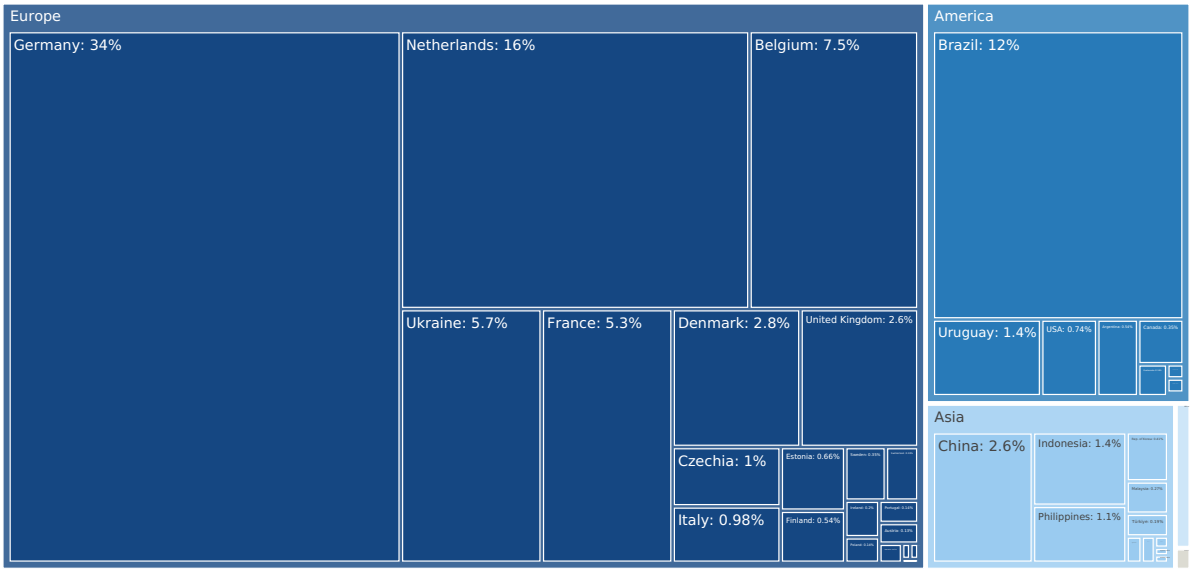
b. The growth of the global market in volume terms in 2024 outperformed the long-term global market growth of the selected product.

The following countries were not included in the calculation of the size of the global market over the last six years due to irregular provision of annual import statistics to the UN Comtrade Database (Top 10 countries with irregular data provision): Burkina Faso, Tunisia, Gambia, Viet Nam, Lithuania, Djibouti, Peru, Saudi Arabia, Zambia, Uzbekistan.

MARKETS CONTRIBUTING TO GLOBAL DEMAND

This section describes the global structure of imports for the chosen product. It utilizes a tree-map diagram, which offers a user-friendly visual representation covering all major importers.

Figure 3. Country-specific Global Imports in 2024, US$-terms



Top-5 global importers of Cocoa Waste in 2024 include:

1. Germany (33.5% share and 25.85% YoY growth rate of imports);
2. Netherlands (15.56% share and 77.25% YoY growth rate of imports);
3. Brazil (12.44% share and 37.64% YoY growth rate of imports);
4. Belgium (7.54% share and -17.26% YoY growth rate of imports);
5. Ukraine (5.74% share and 86.45% YoY growth rate of imports).

Germany accounts for about 33.5% of global imports of Cocoa Waste.

4

COUNTRY MARKET TRENDS

PRODUCT MARKET SNAPSHOT

This section provides data on imports of a specific good to a chosen country.

Country Market Size (2024), US$	US$ 9.86 M
Contribution of Cocoa Waste to the Total Imports Growth in the previous 5 years	US$ 7.76 M
Share of Cocoa Waste in Total Imports (in value terms) in 2024.	0.0%
Change of the Share of Cocoa Waste in Total Imports in 5 years	342.14%

Country Market Size (2024), in tons	4.25 Ktons
CAGR (5 previous years 2020-2024), US$-terms	10.29%
CAGR (5 previous years 2020-2024), volume terms	-26.85%
Proxy price CAGR (5 previous years 2020-2024)	50.77%

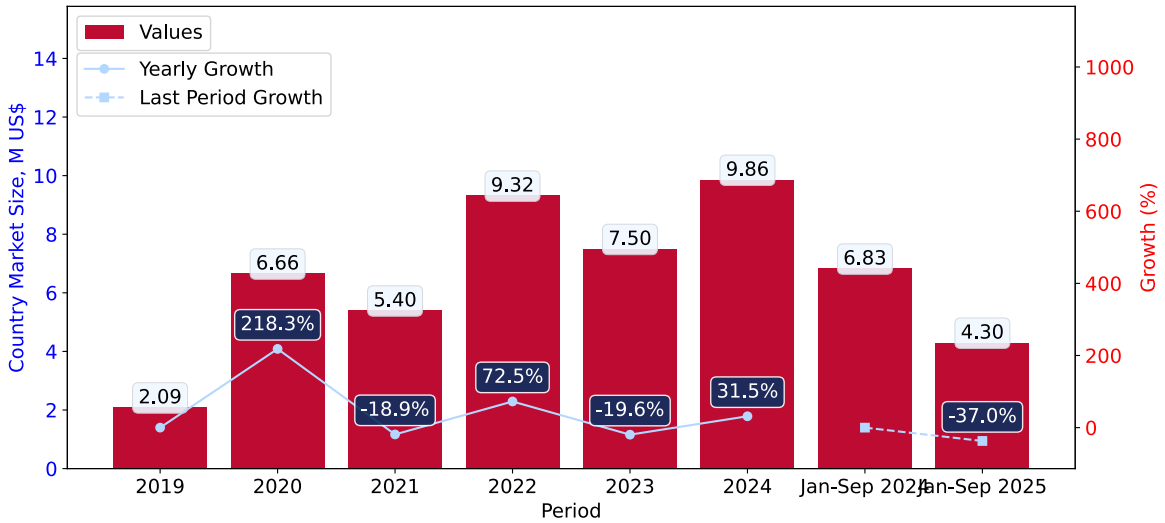
LONG-TERM COUNTRY TRENDS: IMPORTS VALUES

This section provides information on the imports of a specific product to a designated country over the past 5 years, presented in US$ terms. It encompasses the growth rates of imports, the development of long-term import patterns, factors influencing import fluctuations, and an estimation of the country's reliance on imports.

Key points:

i. Long-term performance of Germany's market of Cocoa Waste may be defined as fast-growing.
ii. Decline in demand accompanied by growth in prices may be a leading driver of the long-term growth of Germany's market in US$-terms.
iii. Expansion rates of imports of the product in 01.2025-09.2025 underperformed the level of growth of total imports of Germany.
iv. The strength of the effect of imports of the product on the country's economy is generally low.

Figure 4. Germany's Market Size of Cocoa Waste in M US$ (left axis) and Annual Growth Rates in % (right axis)



a. Germany's market size reached US$9.86M in 2024, compared to US7.5$M in 2023. Annual growth rate was 31.48%.
b. Germany's market size in 01.2025-09.2025 reached US$4.3M, compared to US$6.83M in the same period last year. The growth rate was -37.04%.
c. Imports of the product contributed around 0.0% to the total imports of Germany in 2024. That is, its effect on Germany's economy is generally of a low strength. At the same time, the share of the product imports in the total Imports of Germany remained stable.
d. Since CAGR of imports of the product in US$-terms for the past 5 years exceeded 10.29%, the product market may be defined as fast-growing. Ultimately, the expansion rate of imports of Cocoa Waste was outperforming compared to the level of growth of total imports of Germany (4.08% of the change in CAGR of total imports of Germany).
e. It is highly likely, that decline in demand accompanied by growth in prices was a leading driver of the long-term growth of Germany's market in US$-terms.
f. The best-performing calendar year with the highest growth rate of imports in the US$-terms was 2020. It is highly likely that growth in demand had a major effect.
g. The worst-performing calendar year with the smallest growth rate of imports in the US$-terms was 2023. It is highly likely that biggest drop in import volumes with slow average price growth had a major effect.

LONG-TERM COUNTRY TRENDS: IMPORTS VOLUMES

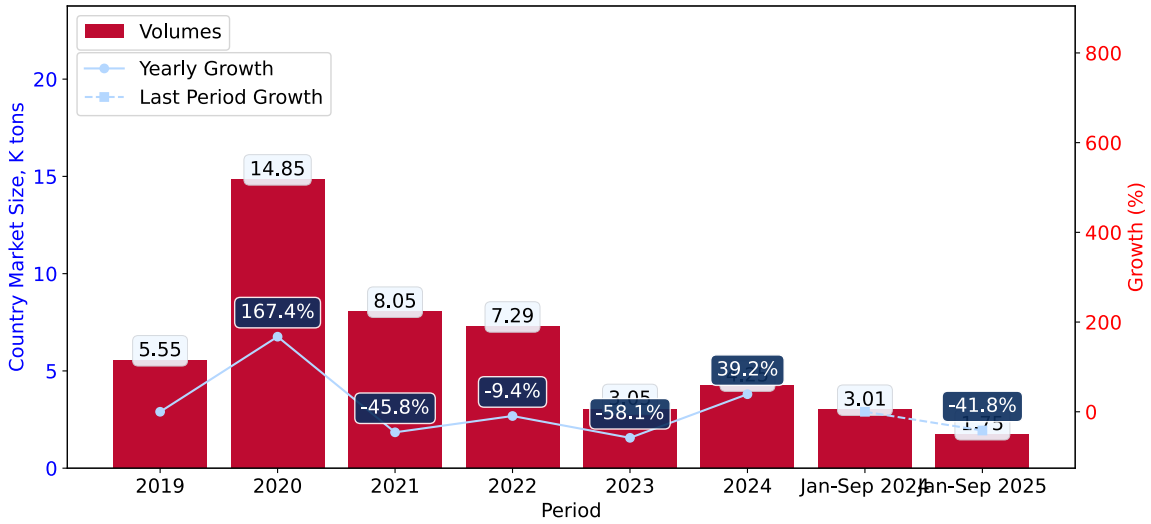
This section presents information regarding the imports of a particular product to a selected country over the last 5 years. It includes details about physical volumes, import growth rates, and the long-term development trend in imports.

Key points:

i. In volume terms, the market of Cocoa Waste in Germany was in a declining trend with CAGR of -26.85% for the past 5 years, and it reached 4.25 Ktons in 2024.

ii. Expansion rates of the imports of Cocoa Waste in Germany in 01.2025-09.2025 underperformed the long-term level of growth of the Germany's imports of this product in volume terms

Figure 5. Germany's Market Size of Cocoa Waste in K tons (left axis), Growth Rates in % (right axis)



a. Germany's market size of Cocoa Waste reached 4.25 Ktons in 2024 in comparison to 3.05 Ktons in 2023. The annual growth rate was 39.19%.

b. Germany's market size of Cocoa Waste in 01.2025-09.2025 reached 1.75 Ktons, in comparison to 3.01 Ktons in the same period last year. The growth rate equaled to approx. -41.76%.

c. Expansion rates of the imports of Cocoa Waste in Germany in 01.2025-09.2025 underperformed the long-term level of growth of the country's imports of Cocoa Waste in volume terms.

LONG-TERM COUNTRY TRENDS: PROXY PRICES

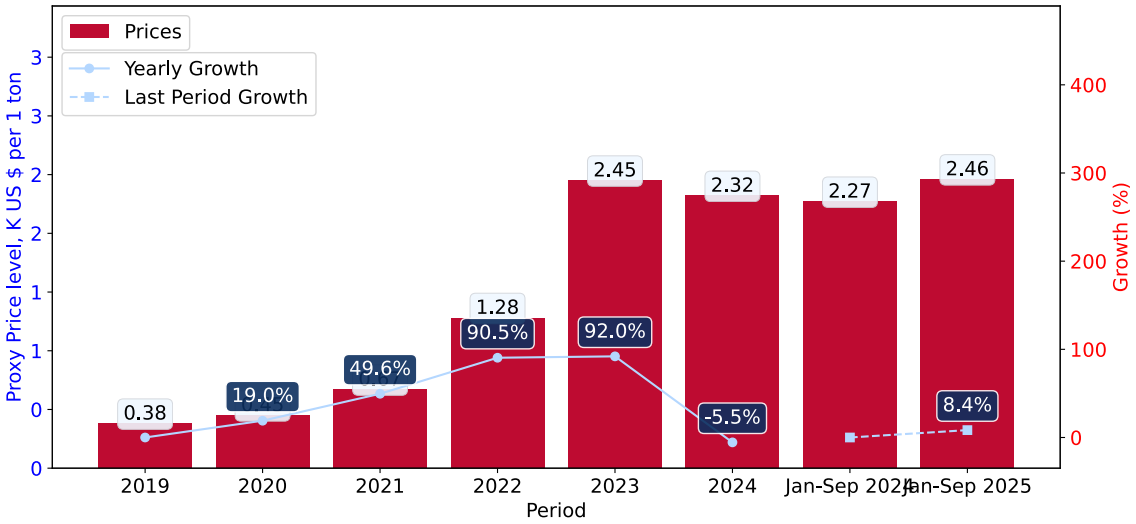
This section provides details regarding the price fluctuations of a specific imported product over the past 5 years. It covers the assessment of average annual proxy prices, their changes, growth rates, and identification of any anomalies in price fluctuations.

Key points:

i. Average annual level of proxy prices of Cocoa Waste in Germany was in a fast-growing trend with CAGR of 50.77% for the past 5 years.

ii. Expansion rates of average level of proxy prices on imports of Cocoa Waste in Germany in 01.2025-09.2025 underperformed the long-term level of proxy price growth.

Figure 6. Germany's Proxy Price Level on Imports, K US$ per 1 ton (left axis), Growth Rates in % (right axis)



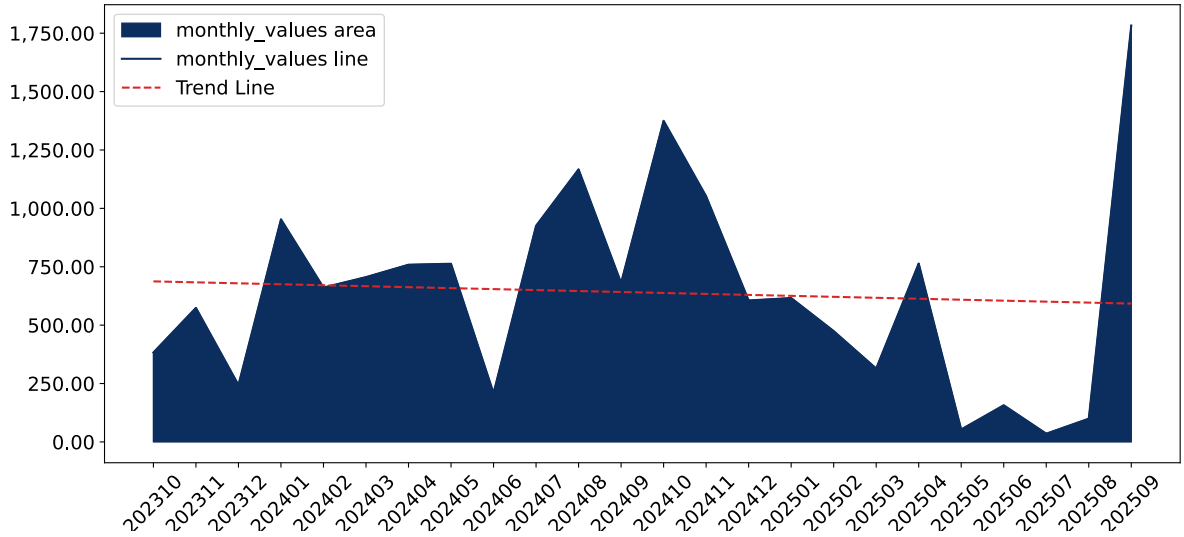
1. Average annual level of proxy prices of Cocoa Waste has been fast-growing at a CAGR of 50.77% in the previous 5 years.
2. In 2024, the average level of proxy prices on imports of Cocoa Waste in Germany reached 2.32 K US$ per 1 ton in comparison to 2.45 K US$ per 1 ton in 2023. The annual growth rate was -5.54%.
3. Further, the average level of proxy prices on imports of Cocoa Waste in Germany in 01.2025-09.2025 reached 2.46 K US$ per 1 ton, in comparison to 2.27 K US$ per 1 ton in the same period last year. The growth rate was approx. 8.37%.
4. In this way, the growth of average level of proxy prices on imports of Cocoa Waste in Germany in 01.2025-09.2025 was lower compared to the long-term dynamics of proxy prices.

SHORT-TERM TRENDS: IMPORTS VALUES

This section offers comprehensive and up-to-date statistics concerning the imports of a specific product into a designated country over the past 24 months for which relevant statistics is published and available. It includes monthly import values in US$, year-on-year changes, identification of any anomalies in imports, examination of factors driving short-term fluctuations. Besides, it provides a quantitative estimation of the short-term trend in imports to supplement the data.

Figure 7. Monthly Imports of Germany, K current US$

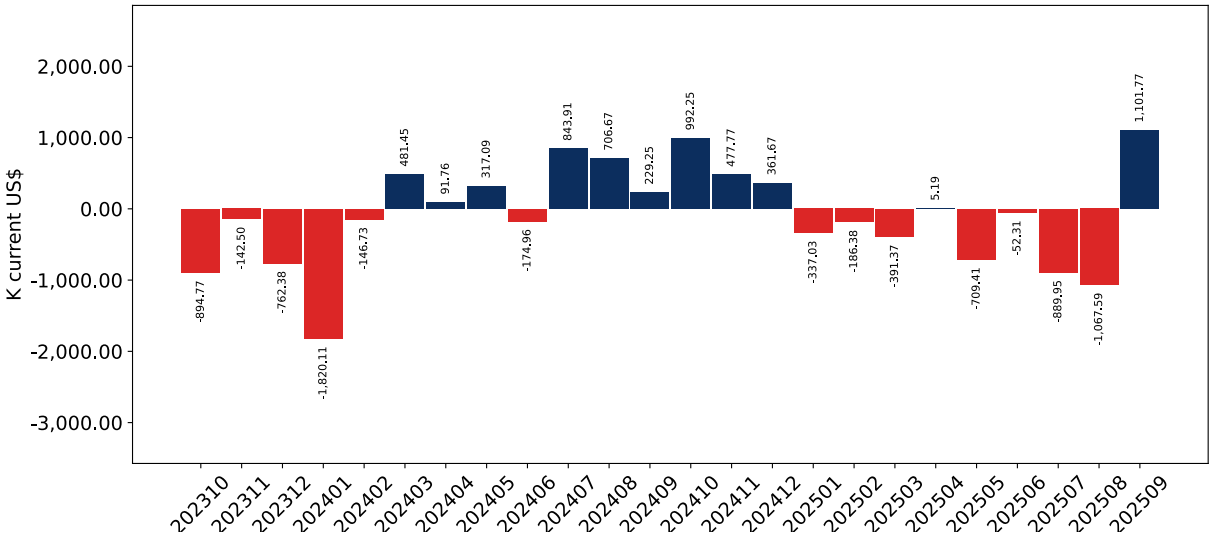
-0.64% monthly
-7.47% annualized



Average monthly growth rates of Germany's imports were at a rate of -0.64%, the annualized expected growth rate can be estimated at -7.47%.

The dashed line is a linear trend for Imports. Values are not seasonally adjusted.

Figure 8. Y-o-Y Monthly Level Change of Imports of Germany, K current US$ (left axis)



Year-over-year monthly imports change depicts fluctuations of imports operations in Germany. The more positive values are on chart, the more vigorous the country in importing of Cocoa Waste. Negative values may be a signal of the market contraction.

Values in columns are not seasonally adjusted.

SHORT-TERM TRENDS: IMPORTS VALUES

This section presents detailed and the most recent data on the imports of a specific commodity to a chosen country over the past 24 months for which relevant statistics is published and available. It encompasses monthly import figures in US dollars, year-on-year changes, anomalies in import patterns, factors driving short-term fluctuations, and includes a quantitative estimation of short-term import trends as additional information.

Key points:

i. The dynamics of the market of Cocoa Waste in Germany in LTM (10.2024 - 09.2025) period demonstrated a stagnating trend with growth rate of -8.66%. To compare, a 5-year CAGR for 2020-2024 was 10.29%.

ii. With this trend preserved, the expected monthly growth of imports in the coming period may reach the level of -0.64%, or -7.47% on annual basis.

iii. Data for monthly imports over the last 12 months contain no record(s) of higher and 2 record(s) of lower values compared to any value for the 48-months period before.

a. In LTM period (10.2024 - 09.2025) Germany imported Cocoa Waste at the total amount of US$7.33M. This is -8.66% growth compared to the corresponding period a year before.

b. The growth of imports of Cocoa Waste to Germany in LTM underperformed the long-term imports growth of this product.

c. Imports of Cocoa Waste to Germany for the most recent 6-month period (04.2025 - 09.2025) underperformed the level of Imports for the same period a year before (-35.79% change).

d. A general trend for market dynamics in 10.2024 - 09.2025 is stagnating. The expected average monthly growth rate of imports of Germany in current USD is -0.64% (or -7.47% on annual basis).

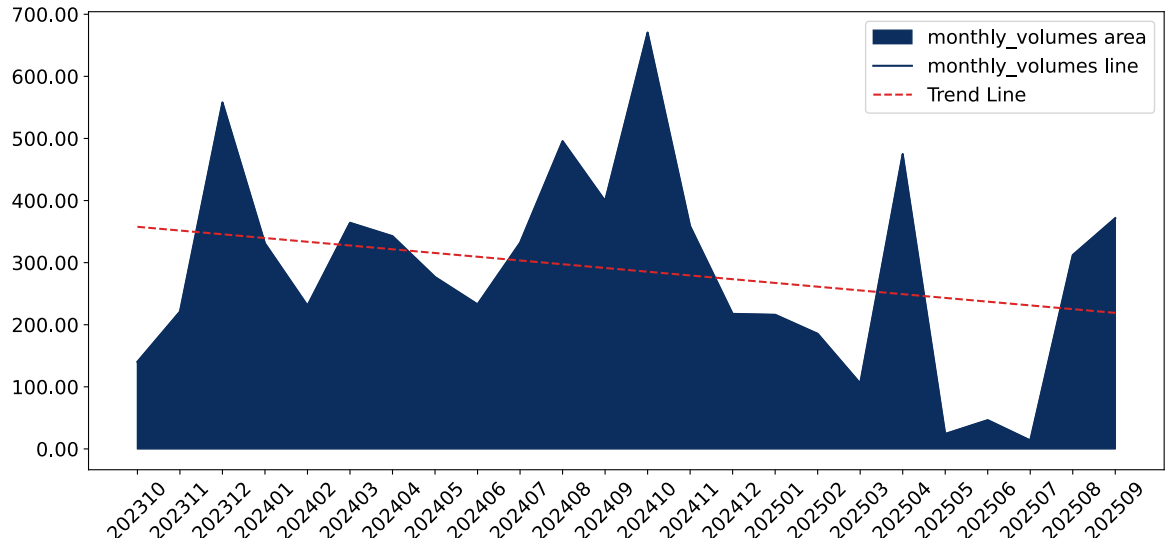
e. Monthly dynamics of imports in last 12 months included no record(s) that exceeded the highest/peak value of imports achieved in the preceding 48 months, and 2 record(s) that bypass the lowest value of imports in the same period in the past.

SHORT-TERM TRENDS: IMPORTS VOLUMES

This section presents detailed and the most recent data on the imports of a specific commodity to a chosen country over the past 24 months for which relevant statistics is published and available. It encompasses monthly import figures in tons, year-on-year changes, anomalies in import patterns, factors driving short-term fluctuations, and includes a quantitative estimation of short-term import trends as additional information.

Figure 9. Monthly Imports of Germany, tons

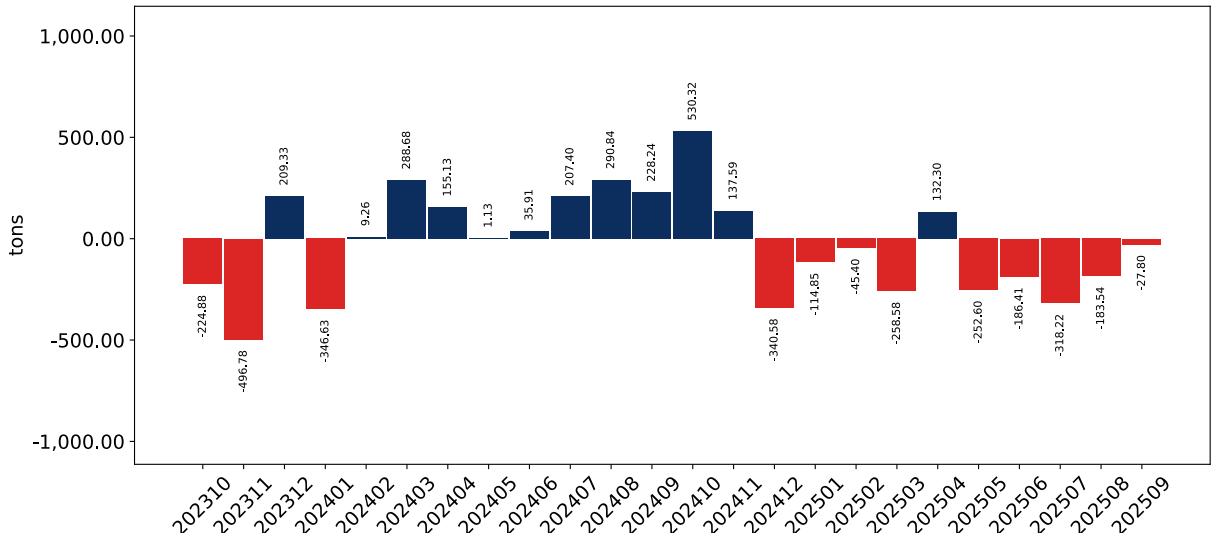
-2.11% monthly
-22.57% annualized



Monthly imports of Germany changed at a rate of -2.11%, while the annualized growth rate for these 2 years was -22.57%.

The dashed line is a linear trend for Imports. Volumes are not seasonally adjusted.

Figure 10. Y-o-Y Monthly Level Change of Imports of Germany, tons



Year-over-year monthly imports change depicts fluctuations of imports operations in Germany. The more positive values are on chart, the more vigorous the country in importing of Cocoa Waste. Negative values may be a signal of market contraction.

Volumes in columns are in tons.

SHORT-TERM TRENDS: IMPORTS VOLUMES

This section presents detailed and the most recent data on the imports of a specific commodity into a chosen country over the past 24 months for which relevant statistics is published and available. It encompasses monthly import figures in tons, year-on-year changes, anomalies in import patterns, factors driving short-term fluctuations, and includes a quantitative estimation of short-term import trends as additional information.

Key points:

i. The dynamics of the market of Cocoa Waste in Germany in LTM period demonstrated a stagnating trend with a growth rate of -23.64%. To compare, a 5-year CAGR for 2020-2024 was -26.85%.

ii. With this trend preserved, the expected monthly growth of imports in the coming period may reach the level of -2.11%, or -22.57% on annual basis.

iii. Data for monthly imports over the last 12 months contain no record(s) of higher and 3 record(s) of lower values compared to any value for the 48-months period before.

a. In LTM period (10.2024 - 09.2025) Germany imported Cocoa Waste at the total amount of 2,997.02 tons. This is -23.64% change compared to the corresponding period a year before.

b. The growth of imports of Cocoa Waste to Germany in value terms in LTM outperformed the long-term imports growth of this product.

c. Imports of Cocoa Waste to Germany for the most recent 6-month period (04.2025 - 09.2025) underperform the level of Imports for the same period a year before (-40.22% change).

d. A general trend for market dynamics in 10.2024 - 09.2025 is stagnating. The expected average monthly growth rate of imports of Cocoa Waste to Germany in tons is -2.11% (or -22.57% on annual basis).

e. Monthly dynamics of imports in last 12 months included no record(s) that exceeded the highest/peak value of imports achieved in the preceding 48 months, and 3 record(s) that bypass the lowest value of imports in the same period in the past.

SHORT-TERM TRENDS: PROXY PRICES

This section provides a quantitative assessment of short-term price fluctuations. It includes details on the monthly proxy price changes, an estimation of the short-term trend in proxy price levels, and identification of any anomalies in price dynamics.

Key points:

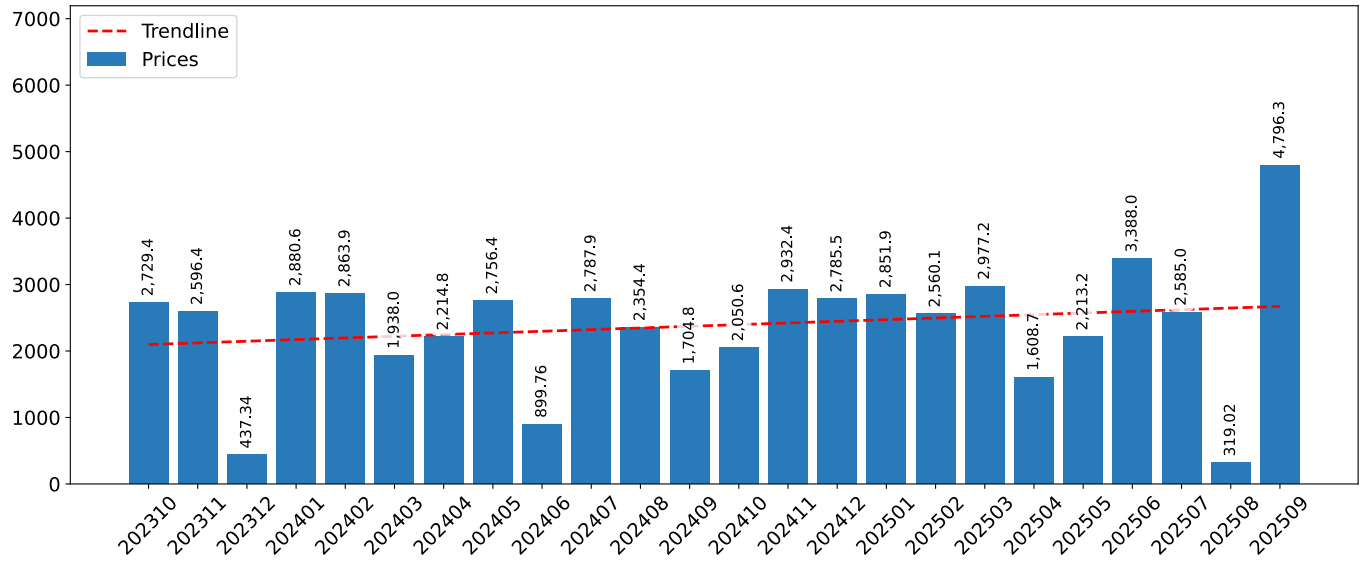
i. The average level of proxy price on imports in LTM period (10.2024-09.2025) was 2,446.0 current US$ per 1 ton, which is a 19.61% change compared to the same period a year before. A general trend for proxy price change was fast-growing.

ii. Decline in demand accompanied by growth in prices was a leading driver of the Country Market Short-term Development.

iii. With this trend preserved, the expected monthly growth of the proxy price level in the coming period may reach the level of 1.06%, or 13.46% on annual basis.

Figure 11. Average Monthly Proxy Prices on Imports, current US$/ton

1.06% monthly
13.46% annualized



a. The estimated average proxy price on imports of Cocoa Waste to Germany in LTM period (10.2024-09.2025) was 2,446.0 current US$ per 1 ton.

b. With a 19.61% change, a general trend for the proxy price level is fast-growing.

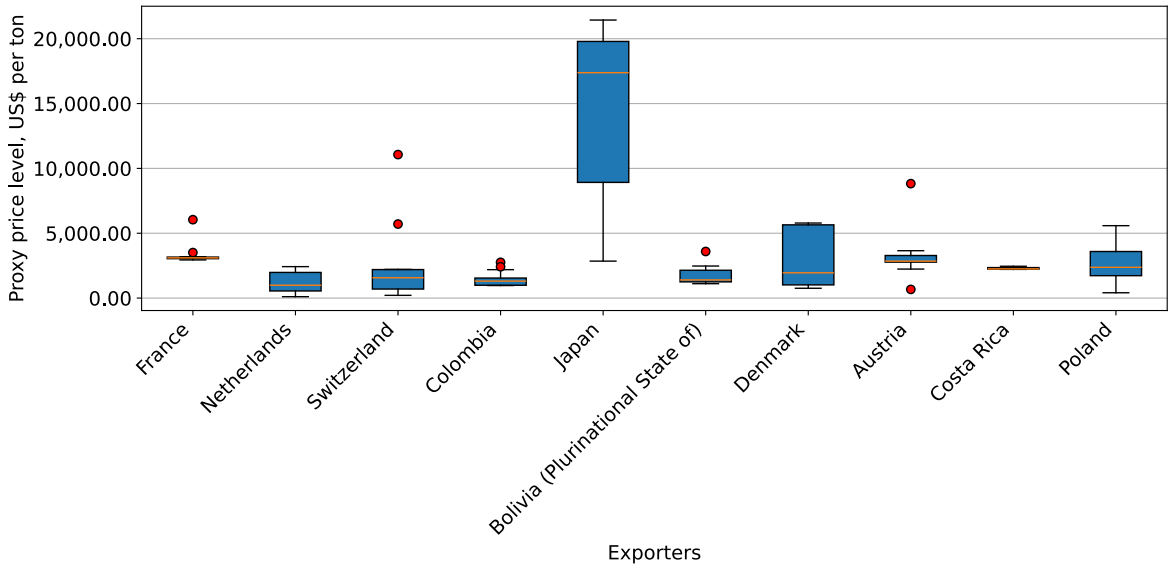
c. Changes in levels of monthly proxy prices on imports for the past 12 months consists of 1 record(s) with values exceeding the highest level of proxy prices for the preceding 48-months period, and no record(s) with values lower than the lowest value of proxy prices in the same period.

d. It is highly likely, that decline in demand accompanied by growth in prices was a leading driver of the short-term fluctuations in the market.

SHORT-TERM TRENDS: PROXY PRICES

This section provides comprehensive details on proxy price levels in a form of box plot. It facilitates the analysis and comparison of proxy prices of the selected good supplied by other countries.

Figure 12. LTM Average Monthly Proxy Prices by Largest Suppliers, Current US$ / ton



The chart shows distribution of proxy prices on imports for the period of LTM (10.2024-09.2025) for Cocoa Waste exported to Germany by largest exporters. The box height shows the range of the middle 50% of levels of proxy price on imports formed in LTM. The higher the box, the wider the spread of proxy prices. The line within the box, a median level of the proxy price level on imports, marks the midpoint of per country data set: half the prices are greater than or equal to this value, and half are less. The upper and lower whiskers represent values of proxy prices outside the middle 50%, that is, the lower 25% and the upper 25% of the proxy price levels. The lowest proxy price level is at the end of the lower whisker, while the highest is at the end of the higher whisker. Red dots represent unusually high or low values (i.e., outliers), which are not included in the box plot.

5

COUNTRY COMPETITION LANDSCAPE

COMPETITION LANDSCAPE: TRADE PARTNERS, VALUES

This section provides an analysis of the trade partner distribution for the selected product imports to the chosen country, focusing on imports values. The countries listed in the table are ranked from the largest to the smallest trade partners, based on the imports values from the most recent available calendar year.

The five largest exporters of Cocoa Waste to Germany in 2024 were:

1. France with exports of 8,998.5 k US$ in 2024 and 3,279.0 k US$ in Jan 25 - Sep 25;
2. Denmark with exports of 233.1 k US$ in 2024 and 19.6 k US$ in Jan 25 - Sep 25;
3. Japan with exports of 198.8 k US$ in 2024 and 444.5 k US$ in Jan 25 - Sep 25;
4. Netherlands with exports of 184.9 k US$ in 2024 and 324.5 k US$ in Jan 25 - Sep 25;
5. Bolivia (Plurinational State of) with exports of 104.2 k US$ in 2024 and 51.3 k US$ in Jan 25 - Sep 25.

Figure 13. Largest Trade Partners of Germany in 2024, K US$

The chart shows largest supplying countries and their shares in imports of Cocoa Waste to Germany in in value terms (US$). Different colors depict geographic regions.

COMPETITION LANDSCAPE: TRADE PARTNERS, VALUES

This graph allows to observe how the shares of key trade partners have been changing over the years.

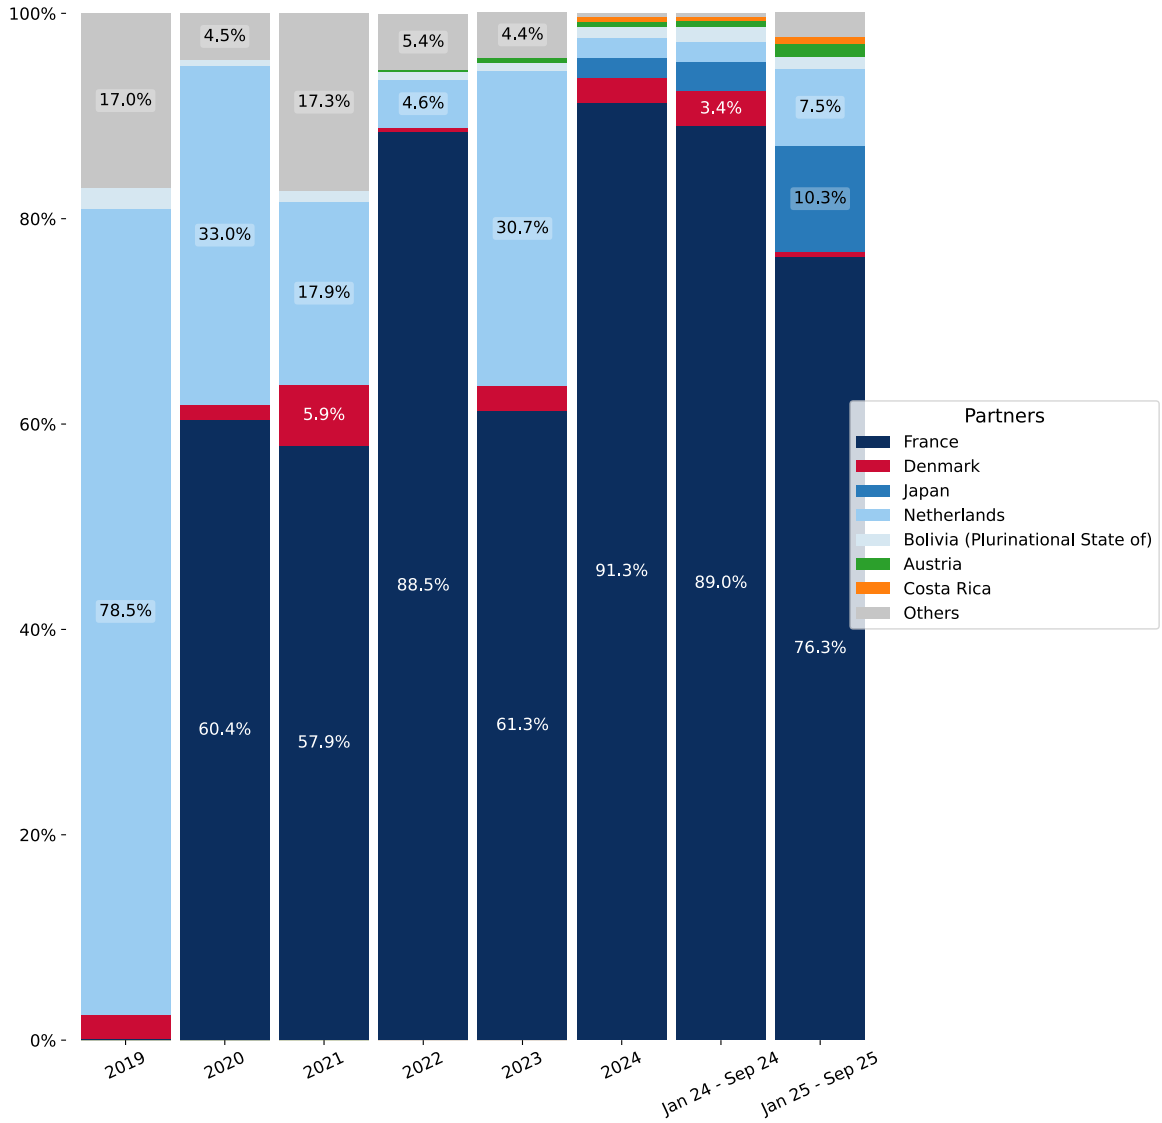
In Jan 25 - Sep 25, the shares of the five largest exporters of Cocoa Waste to Germany revealed the following dynamics (compared to the same period a year before):

1. France: -12.7 p.p.
2. Denmark: -2.9 p.p.
3. Japan: +7.4 p.p.
4. Netherlands: +5.6 p.p.
5. Bolivia (Plurinational State of): -0.3 p.p.

As a result, the distribution of exports of Cocoa Waste to Germany in Jan 25 - Sep 25, if measured in k US$ (in value terms):

1. France 76.3%;
2. Denmark 0.5%;
3. Japan 10.3%;
4. Netherlands 7.5%;
5. Bolivia (Plurinational State of) 1.2%.

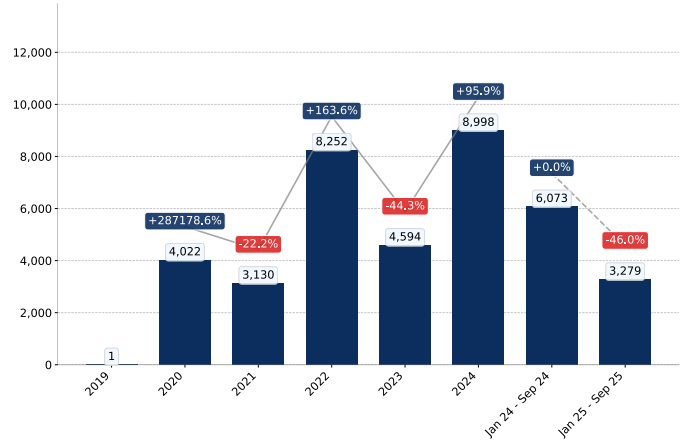
Figure 14. Largest Trade Partners of Germany – Change of the Shares in Total Imports over the Years, K US$



COMPETITION LANDSCAPE: TRADE PARTNERS, VALUES

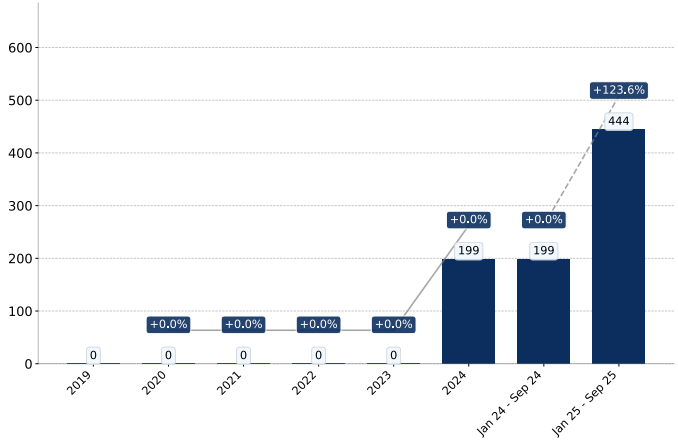
This section provides an analysis of the import dynamics from the top six trade partners, with a focus on imports values.

Figure 15. Germany's Imports from France, K current US$



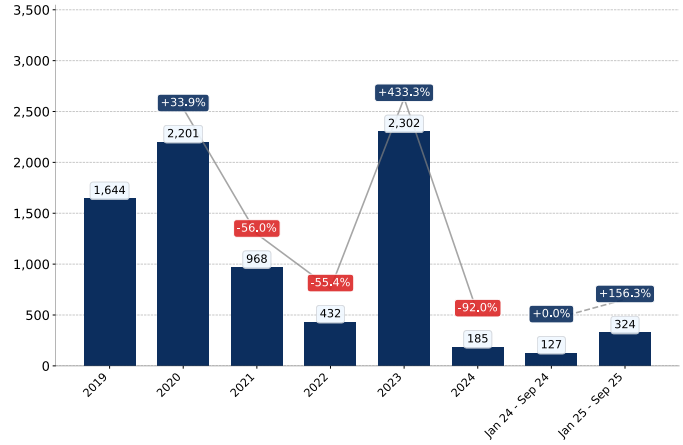
Growth rate of Germany's Imports from France comprised +95.9% in 2024 and reached 8,998.5 K US$. In Jan 25 - Sep 25 the growth rate was -46.0% YoY, and imports reached 3,279.0 K US$.

Figure 16. Germany's Imports from Japan, K current US$



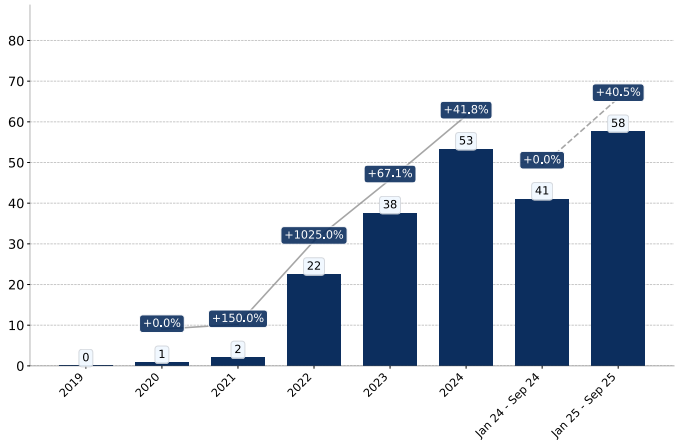
Growth rate of Germany's Imports from Japan comprised +19,880.0% in 2024 and reached 198.8 K US$. In Jan 25 - Sep 25 the growth rate was +123.6% YoY, and imports reached 444.5 K US$.

Figure 17. Germany's Imports from Netherlands, K current US$



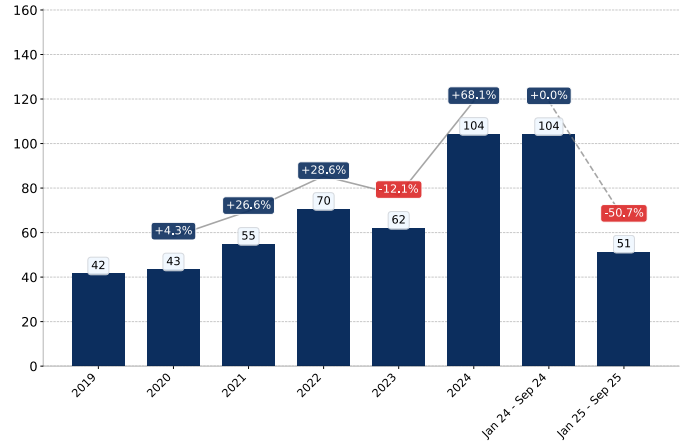
Growth rate of Germany's Imports from Netherlands comprised -92.0% in 2024 and reached 184.9 K US$. In Jan 25 - Sep 25 the growth rate was +156.3% YoY, and imports reached 324.5 K US$.

Figure 18. Germany's Imports from Austria, K current US$



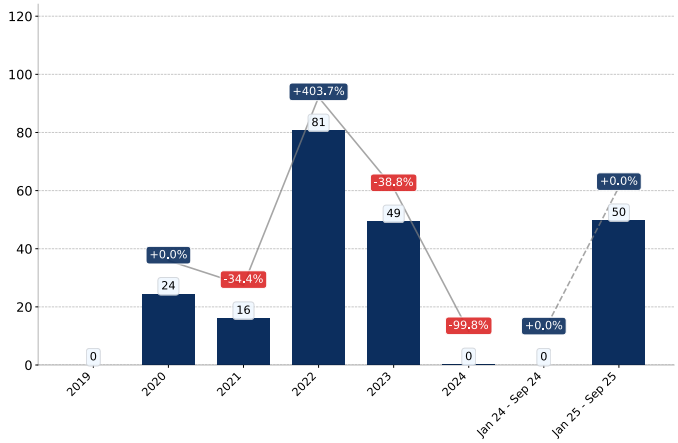
Growth rate of Germany's Imports from Austria comprised +41.8% in 2024 and reached 53.3 K US$. In Jan 25 - Sep 25 the growth rate was +40.5% YoY, and imports reached 57.6 K US$.

Figure 19. Germany's Imports from Bolivia (Plurinational State of), K current US$



Growth rate of Germany's Imports from Bolivia (Plurinational State of) comprised +68.1% in 2024 and reached 104.2 K US$. In Jan 25 - Sep 25 the growth rate was -50.7% YoY, and imports reached 51.3 K US$.

Figure 20. Germany's Imports from Colombia, K current US$



Growth rate of Germany's Imports from Colombia comprised -99.8% in 2024 and reached 0.1 K US$. In Jan 25 - Sep 25 the growth rate was +4,970.0% YoY, and imports reached 49.7 K US$.

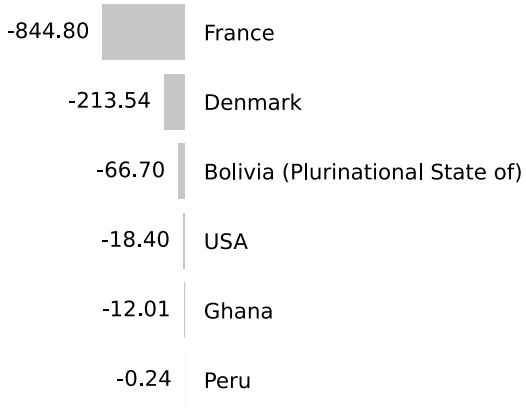
DECLINE CONTRIBUTORS



Total imports change in the period of LTM was recorded at -695.38 K US$

The charts show Top-10 countries with positive and negative contribution to the growth of imports of to in the period of LTM (October 2024 – September 2025 compared to October 2023 – September 2024).

COMPETITION LANDSCAPE: VALUE LTM CHANGES

The tables in this section show the imports by trade partners in last twelve months (LTM) period in terms value and their change compared to the same period 12 months before.

Out of top-5 largest supplying countries, the following exporters of Cocoa Waste to Germany in LTM (October 2024 – September 2025) were characterized by the highest % increase of supplies of Cocoa Waste by value:

1. Guatemala (+776.4%);
2. Colombia (+306.9%);
3. Switzerland (+158.4%);
4. Canada (+152.8%);
5. Japan (+123.6%).

Table 6. Country's Imports by Trade Partners in LTM period and its Change Compared to the Same Period 12 Months Before, current K US$

Partner	PreLTM	LTM	Change, %
France	7,049.1	6,204.3	-12.0
Japan	198.8	444.5	123.6

The exporting countries demonstrated the largest positive contributions to Growth of Supplies of Cocoa Waste to Germany in LTM (October 2024 – September 2025) compared to the previous 12 months period, in absolute terms in K US$, were:

1. Japan: 245.7 K US$ net growth of exports in LTM compared to the pre-LTM period;
2. Netherlands: 102.4 K US$ net growth of exports in LTM compared to the pre-LTM period;
3. Austria: 16.5 K US$ net growth of exports in LTM compared to the pre-LTM period;
4. Colombia: 37.5 K US$ net growth of exports in LTM compared to the pre-LTM period;
5. Costa Rica: 22.0 K US$ net growth of exports in LTM compared to the pre-LTM period.

The exporting countries demonstrated the largest negative contributions to Growth of Supplies of Cocoa Waste to Germany in LTM (October 2024 – September 2025) compared to the previous 12 months period, in absolute terms in K US$, were:

1. France: -844.8 K US$ net decline of exports in LTM compared to the pre-LTM period;
2. Bolivia (Plurinational State of): -66.7 K US$ net decline of exports in LTM compared to the pre-LTM period;
3. Denmark: -213.5 K US$ net decline of exports in LTM compared to the pre-LTM period;
4. Peru: -0.3 K US$ net decline of exports in LTM compared to the pre-LTM period;
5. USA: -18.4 K US$ net decline of exports in LTM compared to the pre-LTM period.

COMPETITION LANDSCAPE: VOLUME LTM CHANGES

This section offers insights into major suppliers of the selected product to a particular country within the last 12 months. A tree-map chart is used to facilitate the identification and better visualization of primary competitors, illustrating market shares in Ktons. Additionally, a diagram highlighting suppliers who experienced significant increases or decreases in market shares during the last 12 months complements the analysis. These are winners or losers from the market share perspective.

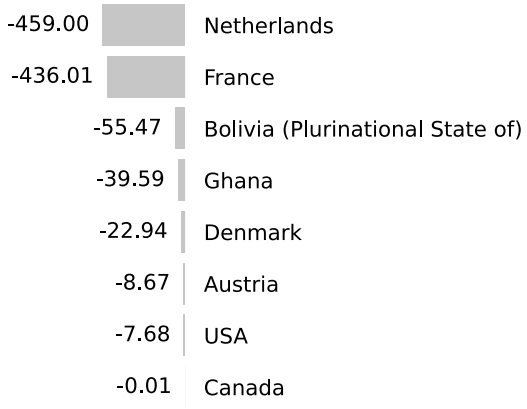
DECLINE CONTRIBUTORS



Total imports change in the period of LTM was recorded at -927.78 tons

The charts show Top-10 countries with positive and negative contribution to the growth of imports of Cocoa Waste to Germany in the period of LTM (October 2024 – September 2025 compared to October 2023 – September 2024).

COMPETITION LANDSCAPE: VOLUME LTM CHANGES

The tables in this section show the imports by trade partners in last twelve months (LTM) period in terms volume and their change compared to the same period 12 months before.

Out of top-5 largest supplying countries, the following exporters of Cocoa Waste to Germany in LTM (October 2024 – September 2025) were characterized by the highest % increase of supplies of Cocoa Waste by volume:

1. Guatemala (+622.0%);
2. Colombia (+199.4%);
3. Switzerland (+144.4%);
4. Japan (+108.5%);
5. Costa Rica (+83.2%).

Table 7. Country's Imports by Trade Partners in LTM period and its Change Compared to the Same Period 12 Months Before, tons

Partner	PreLTM	LTM	Change, %
France	2,203.9	1,767.9	-19.8
Netherlands	1,429.5	970.5	-32.1
Switzerland	29.1	71.2	144.4

Total	**3,924.8**	**2,997.0**	**-23.6**

The exporting countries demonstrated the largest positive contributions to Growth of Supplies of Cocoa Waste to Germany in LTM (October 2024 – September 2025) compared to the previous 12 months period, in absolute terms in tons, were:

1. Switzerland: 42.1 tons net growth of exports in LTM compared to the pre-LTM period;
2. Colombia: 25.2 tons net growth of exports in LTM compared to the pre-LTM period;
3. Japan: 19.3 tons net growth of exports in LTM compared to the pre-LTM period;
4. Costa Rica: 9.1 tons net growth of exports in LTM compared to the pre-LTM period;
5. Poland: 3.1 tons net growth of exports in LTM compared to the pre-LTM period.

The exporting countries demonstrated the largest negative contributions to Growth of Supplies of Cocoa Waste to Germany in LTM (October 2024 – September 2025) compared to the previous 12 months period, in absolute terms in tons, were:

1. France: -436.0 tons net decline of exports in LTM compared to the pre-LTM period;
2. Netherlands: -459.0 tons net decline of exports in LTM compared to the pre-LTM period;
3. Bolivia (Plurinational State of): -55.4 tons net decline of exports in LTM compared to the pre-LTM period;
4. Denmark: -23.0 tons net decline of exports in LTM compared to the pre-LTM period;
5. Austria: -8.6 tons net decline of exports in LTM compared to the pre-LTM period.

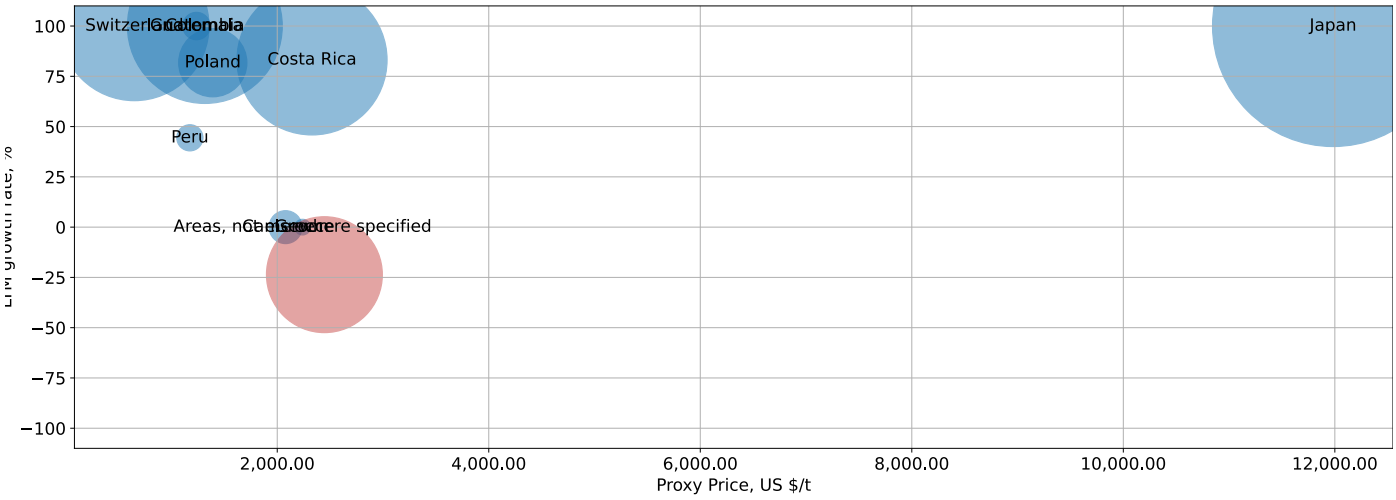
COMPETITION LANDSCAPE: CONTRIBUTORS TO GROWTH

This section presents information about the most successful exporters who managed to significantly increase their supplies over last 12 months. The upper-left corner of the chart highlights countries deemed the most aggressive competitors in the market. The horizontal axis measures the proxy price level offered by suppliers, the vertical axis portrays the growth rate of supplies in volume terms, and the bubble size indicates the extent at which a country-supplier contributed to the growth of imports. The chart encompasses the most recent data spanning the past 12 months.

Figure 66. Top suppliers-contributors to growth of imports of to Germany in LTM (winners)

Average Imports Parameters:
LTM growth rate = -23.64%
Proxy Price = 2,446.0 US$ / t



The chart shows the classification of countries who were among the greatest growth contributors in terms of supply of Cocoa Waste to Germany:

- Bubble size depicts the volume of imports from each country to Germany in the period of LTM (October 2024 – September 2025).
- Bubble's position on X axis depicts the average level of proxy price on imports of Cocoa Waste to Germany from each country in the period of LTM (October 2024 – September 2025).
- Bubble's position on Y axis depicts growth rate of imports of Cocoa Waste to Germany from each country (in tons) in the period of LTM (October 2024 – September 2025) compared to the corresponding period a year before.
- Red Bubble represents a theoretical "average" country supplier out of the top-10 countries shown in the Chart.

Various factors may cause these 10 countries to increase supply of Cocoa Waste to Germany in LTM. Some may be due to the growth of comparative advantages price wise, others may be related to higher quality or better trade conditions. Below is a list of countries, whose proxy price level of supply of Cocoa Waste to Germany seemed to be a significant factor contributing to the supply growth:

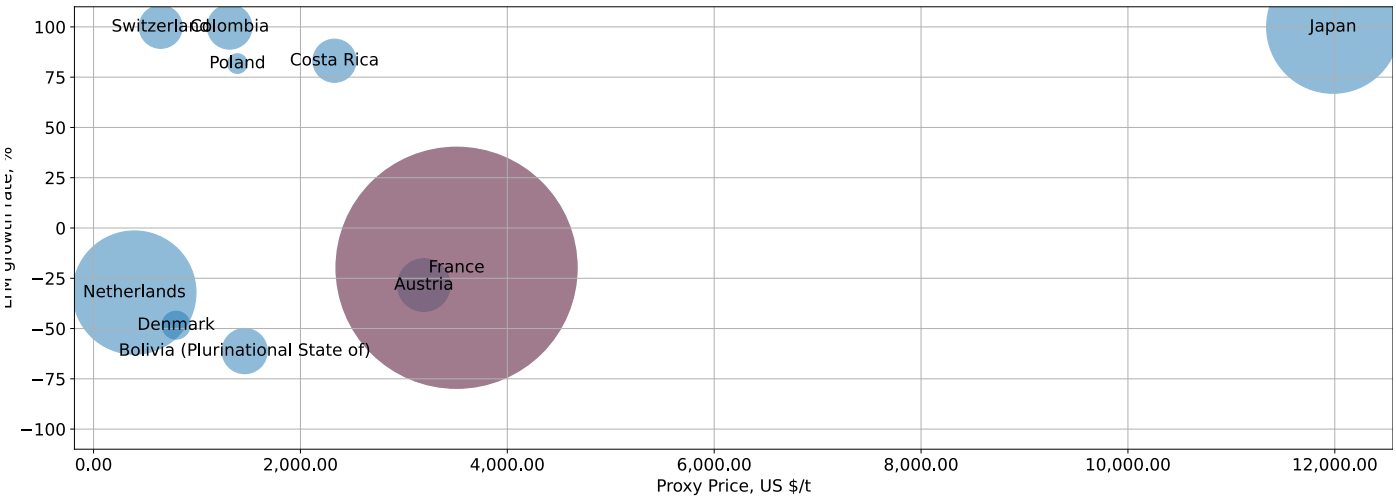
1. Areas, not elsewhere specified;
2. Guatemala;
3. Cameroon;
4. Poland;
5. Costa Rica;
6. Switzerland;
7. Colombia;
8. Netherlands;

COMPETITION LANDSCAPE: TOP COMPETITORS

This section provides details about the primary exporters of a particular product to a designated country. To present a comprehensive view, a bubble-chart is employed, showcasing a country's position relative to others. It simultaneously utilizes three indicators: the horizontal axis measures the proxy price level provided by suppliers, the vertical axis indicates the market share growth rate, and the size of the bubble denotes the volume of imports from a country-supplier. Countries positioned in the upper-left corner of the chart are considered the most competitive players in the market. The chart includes the most recent data spanning the past 12 months.

Figure 67. Top-10 Supplying Countries to Germany in LTM (October 2024 – September 2025)

Total share of identified TOP-10 supplying countries in Germany's imports in US$-terms in LTM was 99.92%



The chart shows the classification of countries who are strong competitors in terms of supplies of Cocoa Waste to Germany:

- Bubble size depicts market share of each country in total imports of Germany in the period of LTM (October 2024 – September 2025).
- Bubble's position on X axis depicts the average level of proxy price on imports of Cocoa Waste to Germany from each country in the period of LTM (October 2024 – September 2025).
- Bubble's position on Y axis depicts growth rate of imports Cocoa Waste to Germany from each country (in tons) in the period of LTM (October 2024 – September 2025) compared to the corresponding period a year before.
- Red Bubble represents the country with the largest market share.

COMPETITION LANDSCAPE: TOP COMPETITORS

This section focuses on competition among suppliers and includes a ranking of countries-exporters that are regarded as the most competitive within the last 12 months.

a) In US$-terms, the largest supplying countries of Cocoa Waste to Germany in LTM (10.2024 - 09.2025) were:

1. France (6.2 M US$, or 84.63% share in total imports);
2. Japan (0.44 M US$, or 6.06% share in total imports);
3. Netherlands (0.38 M US$, or 5.22% share in total imports);
4. Austria (0.07 M US$, or 0.95% share in total imports);
5. Bolivia (Plurinational State of) (0.05 M US$, or 0.7% share in total imports);

b) Countries who increased their imports the most (top-5 contributors to total growth in imports in US $ terms) during the LTM period (10.2024 - 09.2025) were:

1. Japan (0.25 M US$ contribution to growth of imports in LTM);
2. Netherlands (0.1 M US$ contribution to growth of imports in LTM);
3. Colombia (0.04 M US$ contribution to growth of imports in LTM);
4. Switzerland (0.03 M US$ contribution to growth of imports in LTM);
5. Costa Rica (0.02 M US$ contribution to growth of imports in LTM);

c) Countries whose price level of imports may have been a significant factor of the growth of supply (out of Top-10 contributors to growth of total imports):

1. Poland (1,391 US$ per ton, 0.13% in total imports, and 56.76% growth in LTM);
2. Costa Rica (2,329 US$ per ton, 0.64% in total imports, and 89.5% growth in LTM);
3. Switzerland (649 US$ per ton, 0.63% in total imports, and 158.45% growth in LTM);
4. Colombia (1,316 US$ per ton, 0.68% in total imports, and 306.89% growth in LTM);
5. Netherlands (394 US$ per ton, 5.22% in total imports, and 36.53% growth in LTM);

d) Top-3 high-ranked competitors in the LTM period:

1. Colombia (0.05 M US$, or 0.68% share in total imports);
2. Switzerland (0.05 M US$, or 0.63% share in total imports);
3. Japan (0.44 M US$, or 6.06% share in total imports);

6 CONCLUSIONS

LONG-TERM TRENDS OF GLOBAL DEMAND FOR IMPORTS

This section provides a condensed overview of the global imports of the product over the last five calendar years. Its purpose is to facilitate the identification of whether there is an increase or decrease in global demand, the factors influencing this trend, and the primary countries-consumers of the product. A radar chart is utilized to illustrate the intensity of various parameters contributing to long-term demand trend. A higher score on this chart signifies a stronger global demand for a particular product.

Global Imports Long-term Trends, US$-terms

Global market size for Cocoa Waste was reported at US$0.03B in 2024. The top-5 global importers of this good in 2024 include:

- Germany (33.5% share and 25.85% YoY growth rate)
- Netherlands (15.56% share and 77.25% YoY growth rate)
- Brazil (12.44% share and 37.64% YoY growth rate)
- Belgium (7.54% share and -17.26% YoY growth rate)
- Ukraine (5.74% share and 86.45% YoY growth rate)

The long-term dynamics of the global market of Cocoa Waste may be characterized as growing with US$-terms CAGR exceeding 5.78% in 2020-2024.

Market growth in 2024 outperformed the long-term growth rates of the global market in US$-terms.

Global Imports Long-term Trends, volumes

In volume terms, the global market of Cocoa Waste may be defined as stagnating with CAGR in the past five calendar years of -5.74%.

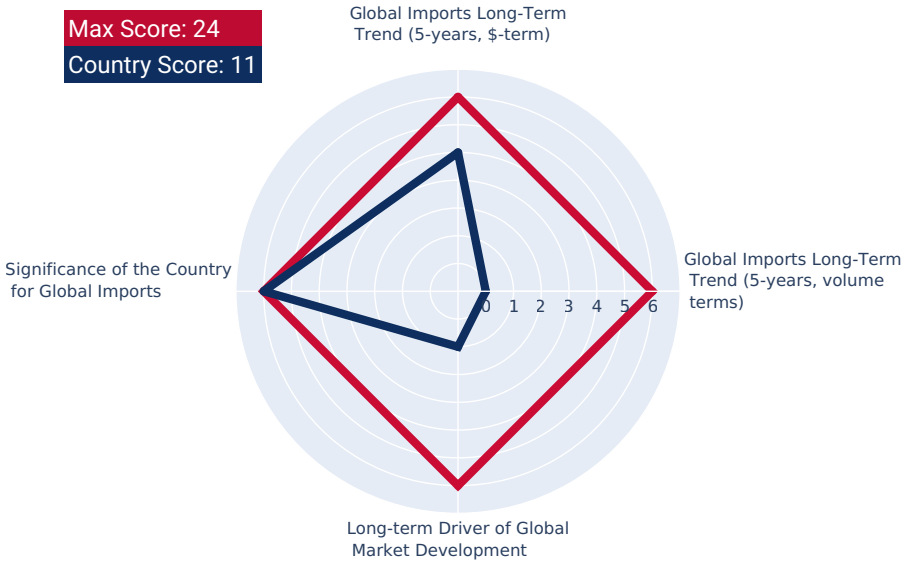
Market growth in 2024 outperformed the long-term growth rates of the global market in volume terms.

Long-term driver

One of main drivers of the global market development was decline in demand accompanied by growth in prices.

Significance of the Country for Global Imports

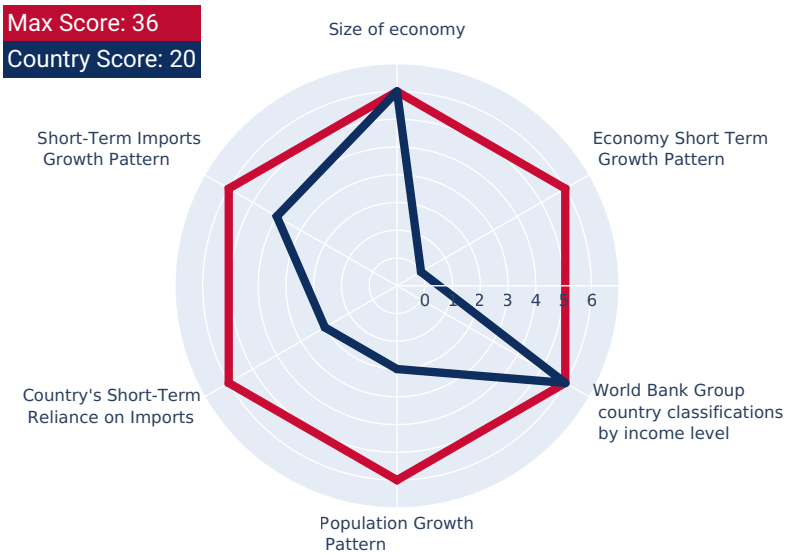
Germany accounts for about 33.5% of global imports of Cocoa Waste in US$-terms in 2024.



STRENGTH OF THE DEMAND FOR IMPORTS IN THE SELECTED COUNTRY

This section provides a high-level overview of the selected country, aiming to gauge various aspects such as the country's economy size, its income level relative to other countries, recent trends in imported goods, and the extent of the global country's reliance on imports. By considering these indicators, one can evaluate the intensity of overall demand for imported goods within the country. A radar chart is employed to present multiple parameters, and the cumulative score of these parameters indicates the strength of the overall demand for imports. A higher total score on this chart reflects a greater level of overall demand strength. This total score serves as an estimate of the intensity of overall demand within the country.

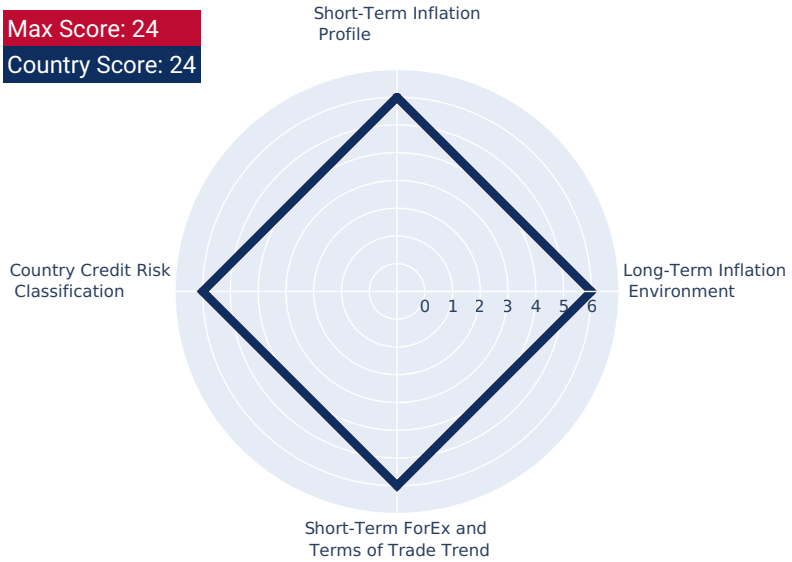
Size of Economy	Germany's GDP in 2024 was 4,659.93B current US$. It was ranked #3 globally by the size of GDP and was classified as a Largest economy.
Economy Short-term Pattern	Annual GDP growth rate in 2024 was -0.24%. The short-term growth pattern was characterized as Economic decline.
The World Bank Group Country Classification by Income Level	Germany's GDP per capita in 2024 was 55,800.22 current US$. By income level, Germany was classified by the World Bank Group as High income country.
Population Growth Pattern	Germany's total population in 2024 was 83,510,950 people with the annual growth rate of -0.47%, which is typically observed in countries with a Population decrease pattern.
Short-term Imports Growth Pattern	Merchandise trade as a share of GDP added up to 66.68% in 2024. Total imports of goods and services was at 1,782.16B US$ in 2024, with a growth rate of 0.19% compared to a year before. The short-term imports growth pattern in 2024 was backed by the stable growth rates of this indicator.
Country's Short-term Reliance on Imports	Germany has Moderate reliance on imports in 2024.



MACROECONOMIC RISKS FOR IMPORTS TO THE SELECTED COUNTRY

This section outlines macroeconomic risks that could affect exports to a specific country. These risks encompass factors like monetary policy instability, the overall stability of the macroeconomic environment, elevated inflation rates, and the possibility of defaulting on debts. The radar chart illustrates these parameters, and a higher cumulative score on the chart indicates decreased risks of exporting to the country.

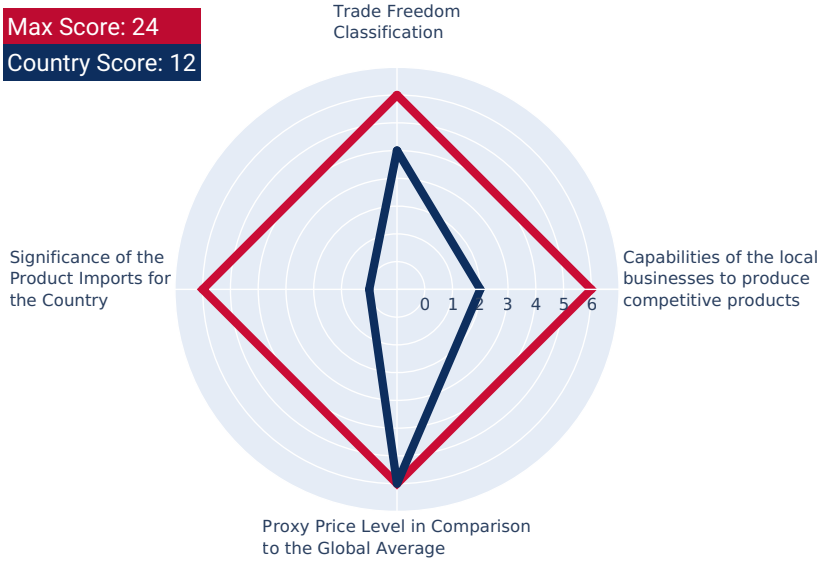
Short-term Inflation Profile	In 2024, inflation (CPI, annual) in Germany was registered at the level of 2.26%. The country's short-term economic development environment was accompanied by the Low level of inflation.
Long-term Inflation Profile	The long-term inflation profile is typical for a Very low inflationary environment.
Short-term ForEx and Terms of Trade Trend	In relation to short-term ForEx and Terms of Trade environment Germany's economy seemed to be More attractive for imports.
Country Credit Risk Classification	High Income OECD country: not reviewed or classified.



MARKET ENTRY BARRIERS AND DOMESTIC COMPETITION PRESSURES FOR IMPORTS OF THE SELECTED PRODUCT

This section provides an overview of import barriers and the competitive pressure faced by imports from local producers. It encompasses aspects such as customs tariffs, the level of protectionism in the local market, the competitive advantages held by importers over local producers, and the country's reliance on imports. A radar chart visualizes these parameters, and a higher cumulative score on the chart indicates lower barriers for entry into the market.

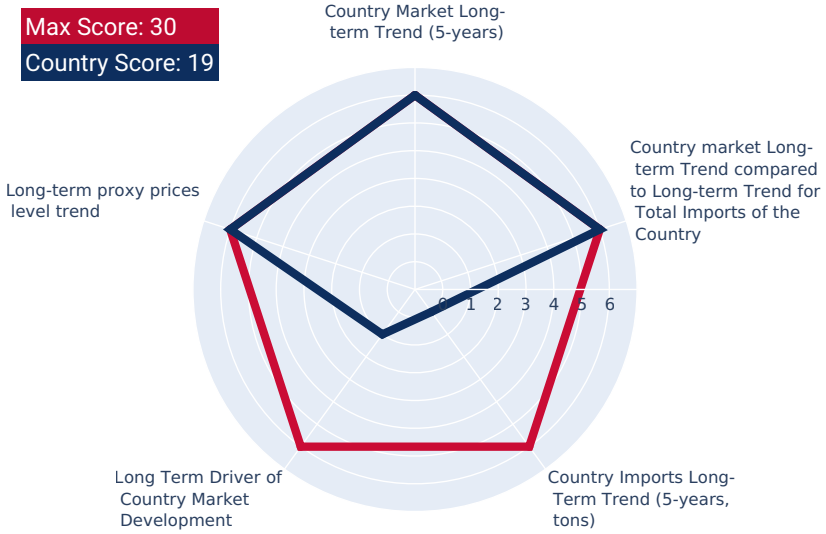
Trade Freedom Classification	Germany is considered to be a Mostly free economy under the Economic Freedom Classification by the Heritage Foundation.
Capabilities of the Local Business to Produce Competitive Products	The capabilities of the local businesses to produce similar and competitive products were likely to be Promising.
Proxy Price Level in Comparison to the Global Average	The Germany's market of the product may have developed to turned into premium for suppliers in comparison to the international level.
Significance of the Product Imports for the Country	The strength of the effect of imports of Cocoa Waste on the country's economy is generally low.



LONG-TERM TRENDS OF COUNTRY MARKET

This section presents the long-term outlook for imports of the selected product to the specific country, offering import values in US$ and Ktons. It encompasses long-term import trends, variations in physical volumes, and long-term price changes. The radar chart within this section measures various parameters, and a higher cumulative score on the chart indicates a stronger local demand for imports of the chosen product.

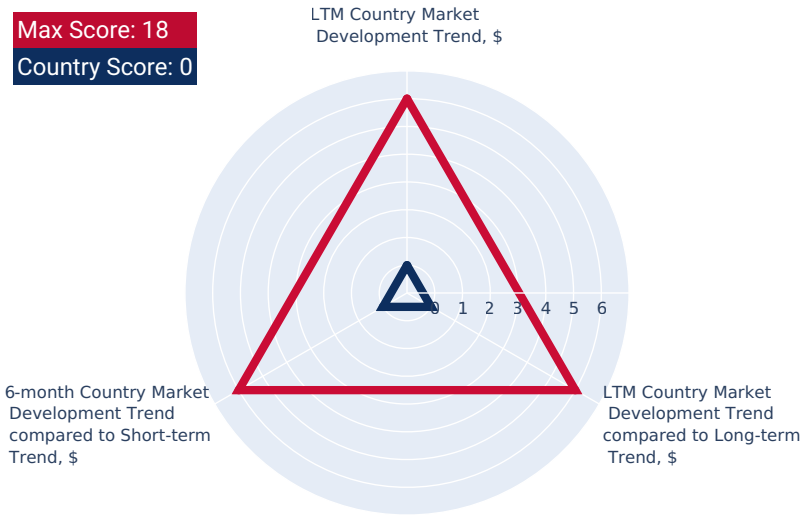
Country Market Long-term Trend, US$-terms	The market size of Cocoa Waste in Germany reached US$9.86M in 2024, compared to US$7.5M a year before. Annual growth rate was 31.48%. Long-term performance of the market of Cocoa Waste may be defined as fast-growing.
Country Market Long-term Trend compared to Long-term Trend of Total Imports	Since CAGR of imports of Cocoa Waste in US$-terms for the past 5 years exceeded 10.29%, as opposed to 4.08% of the change in CAGR of total imports to Germany for the same period, expansion rates of imports of Cocoa Waste are considered outperforming compared to the level of growth of total imports of Germany.
Country Market Long-term Trend, volumes	The market size of Cocoa Waste in Germany reached 4.25 Ktons in 2024 in comparison to 3.05 Ktons in 2023. The annual growth rate was 39.19%. In volume terms, the market of Cocoa Waste in Germany was in declining trend with CAGR of -26.85% for the past 5 years.
Long-term driver	It is highly likely, that decline in demand accompanied by growth in prices was a leading driver of the long-term growth of Germany's market of the product in US$-terms.
Long-term Proxy Prices Level Trend	The average annual level of proxy prices of Cocoa Waste in Germany was in the fast-growing trend with CAGR of 50.77% for the past 5 years.



SHORT-TERM TRENDS OF COUNTRY MARKET, US$-TERMS

This section provides the short-term forecast for imports of the selected product to the subject country. It provides information on imports in US$ terms over the last 12 and 6 months. The radar chart in this section evaluates various parameters, and a higher cumulative score on the chart indicates a stronger tracking of imports in US dollar terms.

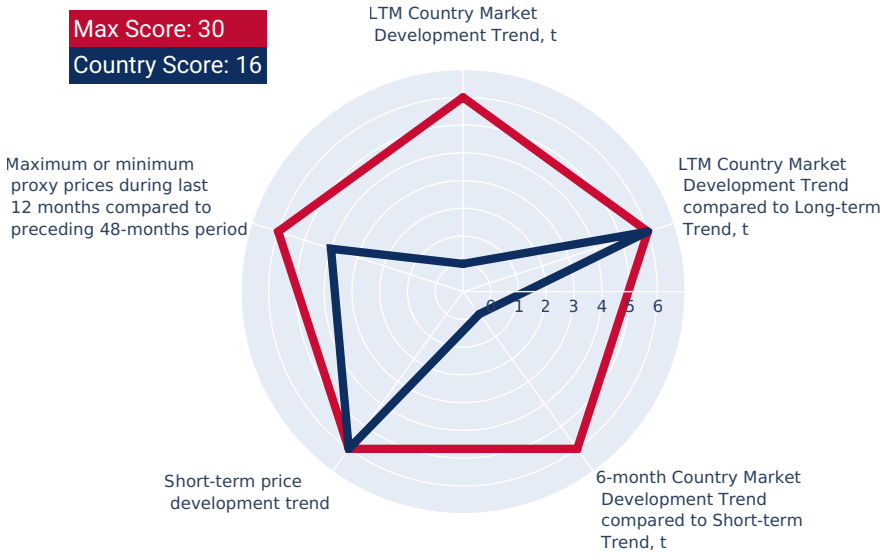
LTM Country Market Trend, US$-terms	In LTM period (10.2024 - 09.2025) Germany's imports of Cocoa Waste was at the total amount of US$7.33M. The dynamics of the imports of Cocoa Waste in Germany in LTM period demonstrated a stagnating trend with growth rate of -8.66%YoY. To compare, a 5-year CAGR for 2020-2024 was 10.29%. With this trend preserved, the expected monthly growth of imports in the coming period may reach the level of -0.64% (-7.47% annualized).
LTM Country Market Trend compared to Long-term Trend, US$-terms	The growth of Imports of Cocoa Waste to Germany in LTM underperformed the long-term market growth of this product.
6-months Country Market Trend compared to Short-term Trend	Imports of Cocoa Waste for the most recent 6-month period (04.2025 - 09.2025) underperformed the level of Imports for the same period a year before (-35.79% YoY growth rate)



SHORT-TERM TRENDS OF COUNTRY MARKET, VOLUMES AND PROXY PRICES

This section offers an insight into the short-term decomposition of imports for the chosen product. It aims to uncover the factors influencing the development of imports in US$ terms, and identify any unusual price fluctuations observed in the last 6 to 12 months. The radar chart in this section assesses multiple parameters, and a higher cumulative score on the chart indicates a more positive short-term outlook for both demand and price within the country.

LTM Country Market Trend, volumes	Imports of Cocoa Waste to Germany in LTM period (10.2024 - 09.2025) was 2,997.02 tons. The dynamics of the market of Cocoa Waste in Germany in LTM period demonstrated a stagnating trend with growth rate of -23.64% in comparison to the preceding LTM period. To compare, a 5-year CAGR for 2020-2024 was -26.85%.
LTM Country Market Trend compared to Long-term Trend, volumes	The growth of imports of Cocoa Waste to Germany in LTM outperformed the long-term dynamics of the market of this product.
6-months Country Market Trend compared to Short-term Trend, volumes	Imports in the most recent six months (04.2025 - 09.2025) fell behind the pattern of imports in the same period a year before (-40.22% growth rate).
Short-term Proxy Price Development Trend	The estimated average proxy price for imports of Cocoa Waste to Germany in LTM period (10.2024 - 09.2025) was 2,446.0 current US$ per 1 ton. A general trend for the change in the proxy price was fast-growing.
Max or Min proxy prices during LTM compared to preceding 48 months	Changes in levels of monthly proxy prices of imports of Cocoa Waste for the past 12 months consists of 1 record(s) of values higher than any of those in the preceding 48-month period, as well as no record(s) with values lower than any of those in the preceding 48-month period.



ASSESSMENT OF THE CHANCES FOR SUCCESSFUL EXPORTS OF THE PRODUCT TO THE COUNTRY MARKET

This section concludes by evaluating the level of attractiveness of the country's market for suppliers. Additionally, it offers an estimate of the potential scale of sales a supplier could achieve in the mid-term, represented in both US$ and Ktons.

Aggregated Country Rank

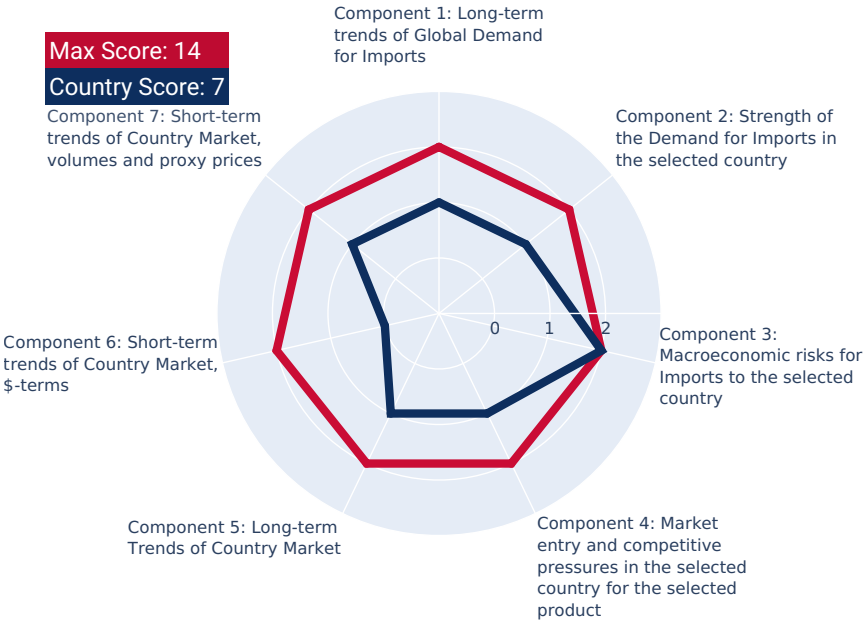
The aggregated country's rank was 7 out of 14. Based on this estimation, the entry potential of this product market can be defined as indicating an uncertain probability of successful entry into the market.

Estimation of the Market Volume that May be Captured by a New Supplier in Mid-Term

A high-level estimation of a share of imports of Cocoa Waste to Germany that may be captured by a new supplier or by existing market player in the upcoming short-term period of 6-12 months, includes two major components:

- **Component 1: Potential imports volume supported by Market Growth.** This is a market volume that can be captured by supplier as an effect of the trend related to market growth. This component is estimated at 0K US$ monthly.
- **Component 2: Expansion of imports due to Competitive Advantages of supplier.** This is a market volume that can be captured by supplier with strong competitive advantages, whether price wise or another, more specific and sustainable competitive advantages. This component is estimated at 4.04K US$ monthly.

In this way, based on recent imports dynamics and high-level analysis of the competition landscape, imports of Cocoa Waste to Germany may be expanded up to 4.04K US$ monthly, which may be captured by suppliers in the short-term. This estimation holds possible should any significant competitive advantages are gained.

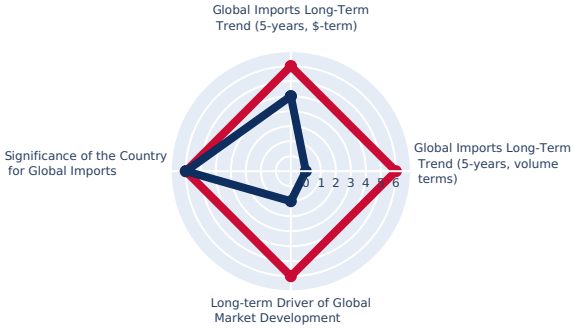


EXPORT POTENTIAL: RANKING RESULTS - 1

Component 1: Long-term trends of Global Demand for Imports

Max Score: 24

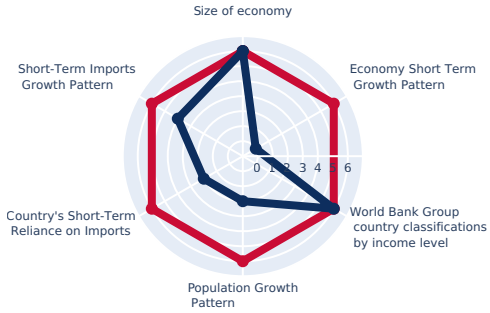
Country Score: 11



Component 2: Strength of the Demand for Imports in the selected country

Max Score: 36

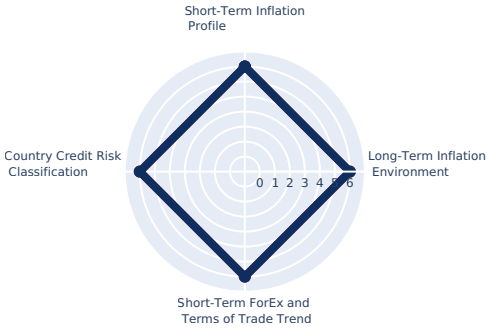
Country Score: 20



Component 3: Macroeconomic risks for Imports to the selected country

Max Score: 24

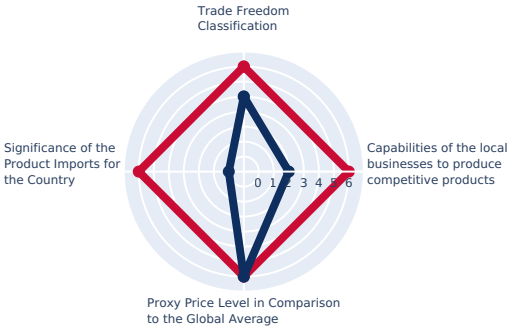
Country Score: 24



Component 4: Market entry barriers and domestic competition pressures for imports of the good

Max Score: 24

Country Score: 12

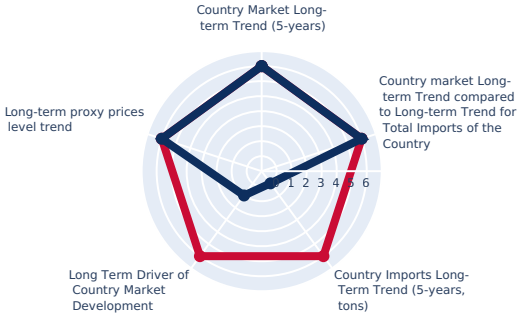


EXPORT POTENTIAL: RANKING RESULTS - 2

Component 5: Long-term trends of Country Market

Max Score: 30

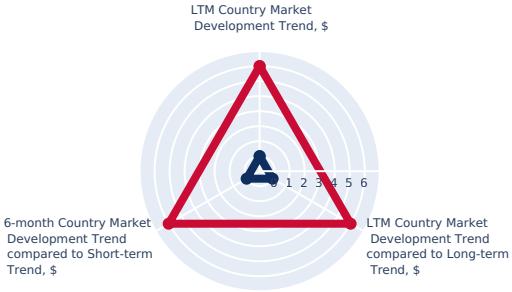
Country Score: 19



Component 6: Short-term trends of Country Market, US$-terms

Max Score: 18

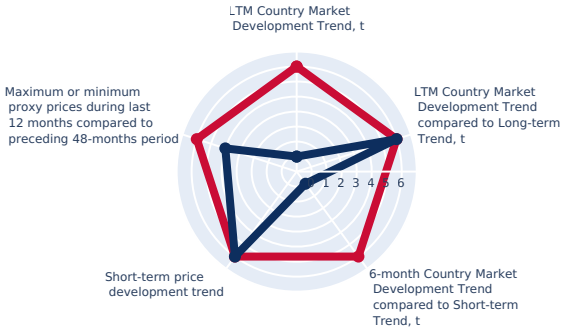
Country Score: 0



Component 7: Short-term trends of Country Market, volumes and proxy prices

Max Score: 30

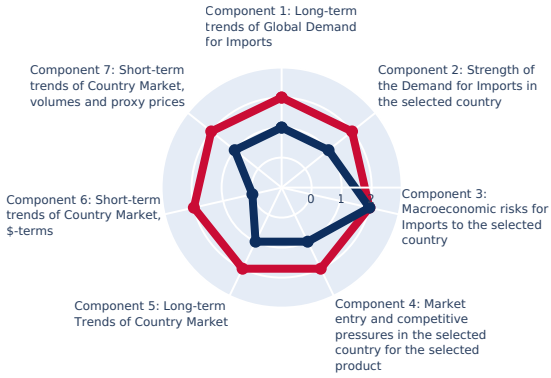
Country Score: 16



Component 8: Aggregated Country Ranking

Max Score: 14

Country Score: 7



Conclusion: Based on this estimation, the entry potential of this product market can be defined as indicating an uncertain probability of successful entry into the market.

MARKET VOLUME THAT MAY BE CAPTURED BY A NEW SUPPLIER IN MID-TERM

This concluding section provides an assessment of the attractiveness level of the chosen country for suppliers. It also includes estimations of the market volume that suppliers can potentially fill, represented in both US$ and Ktons.

Conclusion:

Based on recent imports dynamics and high-level analysis of the competition landscape, imports of Cocoa Waste by Germany may be expanded to the extent of 4.04 K US$ monthly, that may be captured by suppliers in a short-term.

This estimation holds possible should any significant competitive advantages have been gained.

A high-level estimation of a share of imports of Cocoa Waste by Germany that may be captured by a new supplier or by existing market player in the upcoming short-term period of 6-12 months, includes two major components:

- **Component 1: Potential imports volume supported by Market Growth.** This is a market volume that can be captured by supplier as an effect of the trend related to market growth.
- **Component 2: Expansion of imports due to increase of Competitive Advantages of suppliers.** This is a market volume that can be captured by suppliers with strong competitive advantages, whether price wise or another, more specific and sustainable competitive advantages.

Below is an estimation of supply volumes presented separately for both components. In addition, an integrated component was added to estimate total potential supply of Cocoa Waste to Germany.

Estimation of Component 1 of Volume of Potential Supply, which is supported by Market Growth

24-months development trend (volume terms), monthly growth rate	-2.11 %
Estimated monthly imports increase in case the trend is preserved	-
Estimated share that can be captured from imports increase	-
Potential monthly supply (based on the average level of proxy prices of imports)	-

Estimation of Component 2 of Volume of Potential Supply, which is supported by Competitive Advantages

The average imports increase in LTM by top-5 contributors to the growth of imports	19.76 tons
Estimated monthly imports increase in case of completive advantages	1.65 tons
The average level of proxy price on imports of 1802 in Germany in LTM	2,446 US$/t
Potential monthly supply based on the average level of proxy prices on imports	4.04 K US$

Integrated Estimation of Volume of Potential Supply

Component 1. Supply supported by Market Growth	No	0 K US$
Component 2. Supply supported by Competitive Advantages	4.04 K US$	
Market Volume that May be Captured by a New Supplier in Mid-Term, US$ per month	4.04 K US$	

Note: Component 2 works only in case there are strong competitive advantages in comparison to the largest competitors and top growing suppliers.

COUNTRY ECONOMIC OUTLOOK - COMPETITION

This section provides an overview of the competitive environment and trade protection measures within the selected country. It includes detailed information on import tariffs, pricing levels for specific goods, and the competitive advantages held by local producers.

The rate of the tariff = **0%**.
The price level of the market has **turned into premium**.
The level of competitive pressures arisen from the domestic manufacturers is **risk intense with an elevated level of local competition**.

A competitive landscape of Cocoa Waste formed by local producers in Germany is likely to be risk intense with an elevated level of local competition. The potentiality of local businesses to produce similar competitive products is somewhat Promising. However, this doesn't account for the competition coming from other suppliers of this product to the market of Germany.

In accordance with international classifications, the Cocoa Waste belongs to the product category, which also contains another 12 products, which Germany has comparative advantage in producing. This note, however, needs further research before setting up export business to Germany, since it also doesn't account for competition coming from other suppliers of the same products to the market of Germany.

The level of proxy prices of 75% of imports of Cocoa Waste to Germany is within the range of 531.82 - 5,039.29 US$/ton in 2024. The median value of proxy prices of imports of this commodity (current US$/ton 2,171.44), however, is higher than the median value of proxy prices of 75% of the global imports of the same commodity in this period (current US$/ton 844.02). This may signal that the product market in Germany in terms of its profitability may have turned into premium for suppliers if compared to the international level.

Germany charged on imports of Cocoa Waste in 2024 on average 0%. The bound rate of ad valorem duty on this product, Germany agreed not to exceed, is 0%. Once a rate of duty is bound, it may not be raised without compensating the affected parties. At the same time, the rate of the tariff Germany set for Cocoa Waste was lower than the world average for this product in 2024 (5%). This may signal about Germany's market of this product being less protected from foreign competition.

This ad valorem duty rate Germany set for Cocoa Waste has been agreed to be a normal non-discriminatory tariff charged on imports of this product for all WTO member states. However, a country may apply the preferential rates resulting from a reciprocal trading agreement (e.g. free trade agreement or regional trading agreement) or a non-reciprocal preferential trading scheme like the Generalized System of Preference or preferential tariffs for least developed countries. As of 2024, Germany applied the preferential rates for 0 countries on imports of Cocoa Waste. The maximum level of ad valorem duty Germany applied to imports of Cocoa Waste 2024 was 0%. Meanwhile, the share of Cocoa Waste Germany imported on a duty free basis in 2024 was 100%

The European market potential for chocolate

CBI (Centre for the Promotion of Imports from developing countries)

The German chocolate market, Europe's largest manufacturing industry, stabilized in 2023 despite rising cocoa prices, with a projected 20% value growth by 2029 driven by increasing chocolate prices. Germany is a top exporter of chocolate products globally and a significant importer of cocoa from origin countries, indicating robust trade flows and a strong market for cocoa and its derivatives.

Raising the Bar

Oxfam International

German supermarkets are initiating commitments to ensure cocoa farmers receive a living income, highlighting a growing focus on ethical sourcing and sustainability within the cocoa supply chain. This shift could lead to increased costs for cocoa products in Germany, impacting consumer prices and potentially influencing import strategies to meet fair trade standards. Research indicates that a significant portion of chocolate bar value accrues to supermarkets in Germany, while cocoa farmers receive a small percentage, underscoring the need for more equitable distribution of profits.

Determinants of traditional agricultural exports in Nigeria: An application of cointegration and correction model

ResearchGate

Germany is identified as a key importer of cocoa from Nigeria, with the quantity influenced by cocoa supplies from other competing countries. This highlights the competitive landscape of Germany's cocoa import market and the factors affecting trade flows from specific origin countries. The study provides insights into the economic determinants shaping Germany's sourcing decisions for cocoa.

Annual Report 2024/25

Barry Callebaut

Global terminal market prices for cocoa beans significantly increased during the 2024/25 fiscal year, driven by West African crop deterioration, impacting the cost of raw materials for German chocolate manufacturers. Despite this, cocoa bean demand materially weakened in the latter half of the fiscal year, suggesting a complex interplay of supply constraints and demand elasticity affecting global cocoa pricing and, consequently, German import costs. The report also notes a decrease in European sugar prices, which could partially offset rising cocoa costs for the confectionery industry.

RECENT MARKET NEWS

POLICY CHANGES AFFECTING TRADE

POLICY CHANGES AFFECTING TRADE

This section provides an overview of recent policy changes that may impact trade and investment in the country under analysis. The information is sourced from the repository maintained by the Global Trade Alert (GTA). Usage of this material is permitted, provided that proper attribution is given to the Global Trade Alert (GTA).

All materials presented in the following chapter of the report are sourced from the Global Trade Alert (GTA) database.

The Global Trade Alert is the world's premier repository of policy changes affecting global trade and investment. The GTA launched in June 2009, and since then, the independent team has documented tens of thousands state interventions worldwide. The evidence collected by GTA is regularly used by governments, international organizations and leading media brands around the globe.

The GTA is an initiative of the Swiss-based St. Gallen Endowment for Prosperity Through Trade, a neutral, non-profit organisation dedicated to increasing transparency of global policies affecting the digital economy, trade and investment.

For the most up-to-date information on global trade policies and regulations worldwide, we encourage you to visit the official website of the Global Trade Alert at https://globaltradealert.org.

Note: If the following pages do not include information on relevant policy measures, it indicates that no specific active policies related to the product and/or country analyzed were identified at the time of preparing this report based on the selected search criteria.

EU: INCREASED CUSTOMS DUTIES APPLICABLE TO CERTAIN AGRICULTURAL AND FERTILISER IMPORTS FROM RUSSIA AND BELARUS

Date Announced: 2025-06-20 | Date Published: 2025-06-26 | Date Implemented: 2025-06-21

Alert level: **Red**
Intervention Type: **Import tariff**
Affected Counties: **Belarus, Russia**

On 20 June 2025, the European Union published Regulation (EU) 2025/1227 introducing an additional 50% customs duty on certain goods imported from Russia or Belarus. The 101 affected items are classified under 693 six-digit tariff subheadings. This duty applies on top of the applicable MFN tariff and entered into force on 21 June 2025.

The measure also reiterates that imports from these two jurisdictions cannot enjoy any lower tariff under the EU's autonomous import tariff-rate quota or tariff regimes. It also sets a progressive increase for certain fertilisers (see related interventions).

The Regulation notes that "continued imports of the goods concerned from the Russian Federation under the current conditions could make the Union vulnerable to coercive actions by the Russian Federation". In addition, it states that "tariff measures should also be taken in respect of the Republic of Belarus in order to prevent potential imports to the Union from the Russian Federation being diverted through the Republic of Belarus, given the Republic of Belarus's close political and economic ties with the Russian Federation".

Update

On 10 July 2025, the EU published Commission Implementing Regulation (EU) 2025/1344 amending other regulations that manage the import tariff regime to include these changes.

Source: EUR-Lex - Official Journal of the European Union (20 June 2025). Regulation (EU) 2025/1227 of the European Parliament and of the Council on the modification of customs duties applicable to imports of certain goods originating in or exported from the Russian Federation and the Republic of Belarus. EU: TRADE RESTRICTIONS EXTENDED TO INCLUDE UKRAINE'S NON-GOVERNMENT-CONTROLLED REGIONS OF KHERSON AND ZAPORIZHZHIA

Date Announced: 2022-10-06 | Date Published: 2022-10-11 | Date Implemented: 2022-10-07

Alert level: **Red**
Intervention Type: **Import ban**
Affected Counties: **Ukraine**

On 6 October 2022, the EU adopted Council Regulation (EU) 2022/1903 extending the geographical scope of the trade restrictions on the non-government-controlled regions of Ukraine. The regulation extends the blanket import ban on all goods and services to account for the Kherson and Zaporizhzhia regions as well. The measure enters into force one day following its publication.

Notably, the regulation amends Council Regulation (EU) 2022/263 adopted in February 2022 (see related state act). This regulation initially established trade restrictions with the non-government-controlled regions of Donetsk and Luhansk.

The measure also extended an export ban on certain technology goods and the provision of certain services (see related intervention).

In this context, the EU's press release notes: "This new sanctions package against Russia is proof of our determination to stop Putin's war machine and respond to his latest escalation with fake "referenda" and illegal annexation of Ukrainian territories".

EU's sanctions on Russia

On 6 October 2022, the EU passed a series of additional sanctions targeting the Russian Federation for the organisation of what the EU considers "illegal sham referenda" in the Ukrainian regions of Donetsk, Kherson, Luhansk, and Zaporizhzhia. In addition, the EU quotes the mobilisation and the threat of "weapons of mass destruction" by Russia. The package also includes further trade and financial restrictions against Russia (see related state acts).

As of 7 October 2022. Available at: https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A02022R0263-20220414&qid=1665125934851

EU: REVOCATION OF MOST-FAVOURED-NATION STATUS FOR RUSSIA FOLLOWING THEIR ATTACK ON UKRAINE

Date Announced: 2022-03-11 | Date Published: 2022-03-11 | Date Implemented: 2022-03-11

Alert level: **Red**
Intervention Type: **Import tariff**
Affected Counties: **Russia**

On 11 March 2022, the European Commission issued a press release withdrawing the Most-Favoured-Nation (MFN) tariff treatment for Russia in response to their invasion of Ukraine. As a result, Russian goods imported to any of the G7 countries may be subject to a higher import tariff. The Commission has not announced any tariff changes at this time.

In this context, the European Commission's President, Ursula von der Leyen, noted: "We will deny Russia the status of most-favoured-nation in our markets. This will revoke important benefits that Russia enjoys as a WTO member. Russian companies will no longer receive privileged treatment in our economies".

The present decision is taken in coordination with other G7 allies of the EU (see related state acts).

Source: European Commission. Press release. "Statement by President von der Leyen on the fourth package of restrictive measures against Russia". 11/03/2022. Available at: https://ec.europa.eu/commission/presscorner/detail/en/statement_22_1724

EU: TRADE RESTRICTIONS WITH UKRAINE'S NON-GOVERNMENT-CONTROLLED REGIONS OF DONETSK AND LUHANSK

Date Announced: 2022-02-23 | Date Published: 2022-02-25 | Date Implemented: 2022-02-24

Alert level: **Red**
Intervention Type: **Import ban**
Affected Counties: **Ukraine**

On 23 February 2022, the EU adopted Council Regulation (EU) 2022/263 imposing trade restrictions with the two Ukrainian separatist regions of Donetsk and Luhansk oblasts. The Decision includes a blanket import ban on all goods and services originating from non-government-controlled areas in the two regions. This follows Russia's recognition of the two regions as independent regions from Ukraine and the deployment of troops into the region on the same day.

The Decision also included an export ban of certain technology goods and the provision of certain services (see related state intervention).

In this context, the EU's press release notes: "The EU stands ready to swiftly adopt more wide-ranging political and economic sanctions in case of need, and reiterates its unwavering support and commitment to Ukraine’s independence, sovereignty and territorial integrity within its internationally recognised borders".

The measure enters into force one day following its publication on the official gazette.

EU's sanctions on Russia and the Donetsk and Luhansk oblasts

On 23 February 2022, the EU passed its first package of measures targetting the Russian Federation for the recognition of non-government controlled areas of the Donetsk and Luhansk oblasts of Ukraine as independent entities, and the subsequent decision to send Russian troops into these areas. The package includes 10 regulations establishing targeted restrictive measures to Russian politicians and high-profile individuals, trade restrictions, as well as other capital control and financial restrictions (see related state acts).

A second package was announced on 24 February 2022.

Update

On 6 October 2022, the EU adopted Council Regulation (EU) 2022/1903 including a geographical extension of the trade restrictions to include the Kherson and Zaporizhzhia oblasts in the list of non-government-controlled regions (see related state act).

Source: Official Journal of the EU, EUR-Lex. "COUNCIL REGULATION (EU) 2022/263 of 23 February 2022 concerning restrictive measures in response to the recognition of the non-government controlled areas of the Donetsk and Luhansk oblasts of Ukraine and the ordering of Russian armed forces into those areas". 23/02/2022. EU: COMMISSION REMOVES ARMENIA AND VIETNAM FROM THE GSP SCHEME FROM 2022 ONWARDS

Date Announced: 2021-02-02 | Date Published: 2022-08-18 | Date Implemented: 2022-01-01

Alert level: **Red**
Intervention Type: **Import tariff**
Affected Counties: **Armenia, Vietnam**

On 2 February 2021, the European Union adopted Commission Delegated Regulation (EU) 2021/114 removing Armenia and Vietnam from its Generalised Scheme of Preferences (GSP). In particular, Armenia was removed given its classification as an "upper-middle-income country" by the World Bank since 2018, whilst Vietnam was removed given the Trade Agreement and an Investment Protection Agreement between the EU and Vietnam in force since August 2020. The removals enter into force on 1 January 2022.

The changes were introduced via a modification of the Annexes of Regulation (EU) No 978/2012, where the official list of affected products is published. The removals imply higher import duties on several products originating from these countries.

EU's Generalised Scheme of Preferences

The GSP is a unilateral mechanism under which the EU removes import duties on products coming from vulnerable developing countries. The objective is "to contribute to alleviate poverty and create jobs in developing countries based on international values and principles, including labour and human rights.

10 LIST OF COMPANIES

LIST OF COMPANIES: DISCLAIMER

This section presents lists of companies generated with the assistance of Google's Gemini AI model. The objective is to help identify potential exporters and buyers of the product under analysis in the country under investigation. These AI-generated insights are designed to complement trade statistics, providing an additional layer of micro-level business intelligence for more informed market entry and partnership decisions.

AI-Generated Content Notice: This list of companies has been generated using Google's Gemini AI model. While we've made efforts to ensure accuracy, the information may contain errors or omissions. We recommend verifying critical details through additional sources before making business decisions based on this data.

Data and Sources:

The company data presented in this section is generated by Google's Gemini AI model based on the product and market parameters provided. The AI analyzes various public sources including company websites, industry reports, business directories, and market databases to identify relevant exporters and buyers. However, this information should be considered as a starting point for further research rather than definitive market intelligence.

POTENTIAL EXPORTERS

This section provides detailed information about potential or actual export companies in the target market, including their business profiles, operations.

El Ceibo Ltda.

Country: Bolivia (Plurinational State of)

Nature of Business: Cocoa producer cooperative

Product Focus & Scale: Organic and fair-trade cocoa and chocolate products, involved in the entire value chain.

Operations in Importing Country: Bolivian cocoa is sought after by top global chocolate makers, with Germany being a top buyer.

Ownership Structure: Cooperative

COMPANY PROFILE

El Ceibo is a cooperative of cocoa producers in Bolivia, known for its organic and fair-trade cocoa and chocolate products. They are involved in the entire value chain from cultivation to processing.

GROUP DESCRIPTION

Cooperative of cocoa producers.

RECENT NEWS

Bolivian cocoa has seen new export highs, with Germany among the top buyers. El Ceibo is a well-known entity in the Bolivian cocoa industry, often highlighted for its sustainable practices and export success.

POTENTIAL EXPORTERS

This section provides detailed information about potential or actual export companies in the target market, including their business profiles, operations.

Cargill France

Country: France

Nature of Business: Global agricultural and food company

Product Focus & Scale: Significant operations in cocoa processing, sourcing, processing, and supplying cocoa and chocolate products.

Operations in Importing Country: Strong presence in Germany.

Ownership Structure: Privately held

COMPANY PROFILE

Cargill is a global agricultural and food company with significant operations in France, including cocoa processing. The company is involved in sourcing, processing, and supplying cocoa and chocolate products to various industries.

GROUP DESCRIPTION

Subsidiary of Cargill, Incorporated, a privately held global corporation.

RECENT NEWS

Cargill is a major manufacturer of cocoa and chocolate products, with a strong presence in the Netherlands and Germany, indicating a robust European supply chain for cocoa and its by-products.

POTENTIAL EXPORTERS

This section provides detailed information about potential or actual export companies in the target market, including their business profiles, operations.

Barry Callebaut France

Country: France

Nature of Business: Manufacturer of chocolate and cocoa products

Product Focus & Scale: Leading manufacturer of high-quality chocolate and cocoa products, operating on a significant industrial scale.

Operations in Importing Country: Active in the German market.

Ownership Structure: Publicly listed

COMPANY PROFILE

Barry Callebaut is a leading manufacturer of high-quality chocolate and cocoa products, serving the entire food industry. Its French operations are part of its extensive global network, focusing on cocoa processing and chocolate production.

GROUP DESCRIPTION

Subsidiary of the Swiss-based Barry Callebaut AG.

RECENT NEWS

Barry Callebaut is identified as a large industrial chocolate manufacturer active in the German market, with its own importing departments, suggesting a comprehensive supply chain that could include the export of cocoa by-products from its French facilities.

POTENTIAL EXPORTERS

This section provides detailed information about potential or actual export companies in the target market, including their business profiles, operations.

Cargill Cocoa & Chocolate (Netherlands)

Country: Netherlands

Nature of Business: Cocoa grinding and processing

Product Focus & Scale: Extensive cocoa grinding and processing facilities, producing cocoa liquor, butter, powder, and chocolate.

Operations in Importing Country: Exports to various European countries, including Germany.

Ownership Structure: Privately held

COMPANY PROFILE

Cargill's Dutch operations are a cornerstone of its global cocoa and chocolate business, encompassing extensive cocoa grinding and processing facilities. They produce cocoa liquor, butter, powder, and chocolate.

GROUP DESCRIPTION

Part of the global Cargill, Incorporated.

RECENT NEWS

Cargill is noted as one of the largest players in the global cocoa market with a significant processing facility in the Netherlands. It is also mentioned as a large importer of cocoa beans in the Netherlands.

POTENTIAL EXPORTERS

This section provides detailed information about potential or actual export companies in the target market, including their business profiles, operations.

Olam Food Ingredients (ofi) (Netherlands)

Country: Netherlands

Nature of Business: Food and beverage ingredients

Product Focus & Scale: Substantial cocoa processing operations, producing a wide range of cocoa ingredients.

Operations in Importing Country: Exports to various international markets, with a strong focus on Europe.

COMPANY PROFILE

Ofi (Olam Food Ingredients) is a global leader in food and beverage ingredients, with substantial cocoa processing operations in the Netherlands, notably through its De Zaan brand. They produce a wide range of cocoa ingredients.

GROUP DESCRIPTION

Subsidiary of Olam Group, a global agribusiness company.

RECENT NEWS

Olam (De Zaan) is listed among important Dutch companies in the cocoa and chocolate industry, known for its quality and innovation in cocoa products. Volza's data indicates OLAM COCOA B V as a leading cocoa powder supplier in the Netherlands, exporting to numerous buyers globally.

POTENTIAL EXPORTERS

This section provides detailed information about potential or actual export companies in the target market, including their business profiles, operations.

Daarnhouwer & Co. B.V.

Country: Netherlands

Nature of Business: Cocoa trading

Product Focus & Scale: Sourcing, logistics, warehousing, and quality control of cocoa beans and cocoa products.

Operations in Importing Country: Exports cocoa beans and products globally.

Ownership Structure: Privately owned

COMPANY PROFILE

Daarnhouwer & Co. is a long-established cocoa trading company based in the Netherlands, specializing in sourcing, logistics, warehousing, and quality control of cocoa beans and cocoa products. They offer a wide range of cocoa origins and qualities.

RECENT NEWS

Daarnhouwer is explicitly mentioned as an example of a Dutch cocoa trader. The company emphasizes its expertise in sourcing, logistics, and quality control for cocoa beans and products.

POTENTIAL EXPORTERS

This section provides detailed information about potential or actual export companies in the target market, including their business profiles, operations.

Dutch Cocoa BV

Country: Netherlands

Nature of Business: Cocoa processing

Product Focus & Scale: Specializing in high-quality cocoa mass, cocoa butter, and cocoa powder.

Operations in Importing Country: Exports products internationally.

COMPANY PROFILE

Dutch Cocoa BV is a cocoa processing company located in Amsterdam, specializing in high-quality cocoa mass, cocoa butter, and cocoa powder. It is part of the Ecom Agroindustrial Group.

GROUP DESCRIPTION

Subsidiary of the Ecom Agroindustrial Group.

RECENT NEWS

Dutch Cocoa is listed among important Dutch companies in the cocoa and chocolate industry. It is described as a leader in sustainable and ethical programs, processing high-quality cocoa mass, butter, and powder.

POTENTIAL BUYERS OR IMPORTERS

This section provides detailed information about potential or actual buyer companies in the target market, including their business profiles, product usage.

Cargill Germany

Cocoa and chocolate manufacturer

Country: Germany

Product Usage: Uses imported cocoa beans as raw materials for their extensive cocoa processing and chocolate production in Germany.

Ownership Structure: Privately held

COMPANY PROFILE

Cargill operates cocoa and chocolate plants in Berlin, producing chocolate and cocoa mass for industrial customers in the baked goods, confectionery, and ice cream categories.

GROUP DESCRIPTION

Subsidiary of Cargill, Incorporated, a global privately held corporation.

RECENT NEWS

Cargill is explicitly mentioned as one of the large importers of cocoa beans and/or cocoa derivatives active in Germany. Their Berlin plants have been part of the Cargill corporate family since 2011.

POTENTIAL BUYERS OR IMPORTERS

This section provides detailed information about potential or actual buyer companies in the target market, including their business profiles, product usage.

Albrecht & Dill Trading GmbH

Trading company

Country: Germany

Product Usage: Imports cocoa beans and derivatives from over 40 different origins, including conventional and specialty cocoa, and stores them to meet buyer demands.

COMPANY PROFILE

Albrecht & Dill Trading is a trading company specializing in the import and export of raw cocoa beans, liquor, butter, cake, and powder. They serve both large companies and craft chocolate makers.

RECENT NEWS

Albrecht & Dill Trading is cited as an example of a large importer of cocoa beans and/or cocoa derivatives active in Germany. They emphasize their portfolio of diverse cocoa origins and their ability to accommodate various timed releases.

POTENTIAL BUYERS OR IMPORTERS

This section provides detailed information about potential or actual buyer companies in the target market, including their business profiles, product usage.

Barry Callebaut Germany

Manufacturer of chocolate and cocoa products

Country: Germany

Product Usage: Imports cocoa beans directly through its own importing departments to produce a wide range of chocolate and cocoa products for other food companies.

Ownership Structure: Publicly listed

COMPANY PROFILE

Barry Callebaut is a leading manufacturer of high-quality chocolate and cocoa products for the food industry. It is one of the largest industrial chocolate manufacturers worldwide and has production and grinding facilities in Germany.

GROUP DESCRIPTION

Subsidiary of the Swiss-based Barry Callebaut AG.

RECENT NEWS

Barry Callebaut is listed as a top chocolate company in Germany and is noted for having its own importing departments for sourcing cocoa beans directly.

POTENTIAL BUYERS OR IMPORTERS

This section provides detailed information about potential or actual buyer companies in the target market, including their business profiles, product usage.

Alfred Ritter GmbH & Co. KG (Ritter Sport)

Chocolate manufacturer

Country: Germany

Product Usage: Imports cocoa beans and other cocoa ingredients for its production processes.

Ownership Structure: Family-owned

COMPANY PROFILE

Alfred Ritter GmbH & Co. KG is a well-known German chocolate manufacturer, famous for its Ritter Sport chocolate squares. It is a major player in the German confectionery market.

RECENT NEWS

Alfred Ritter & Co. is mentioned among large chocolate manufacturers active in the German market that source their cocoa beans directly.

POTENTIAL BUYERS OR IMPORTERS

This section provides detailed information about potential or actual buyer companies in the target market, including their business profiles, product usage.

August Storck KG

Confectionery manufacturer

Country: Germany

Product Usage: Imports cocoa beans and other cocoa ingredients for the production of its chocolate and confectionery products.

Ownership Structure: Privately owned

COMPANY PROFILE

August Storck KG is a major German confectionery manufacturer, known for brands like Toffifee, Merci, and Knoppers. They also produce private label brand products for retailers.

RECENT NEWS

August Storck KG is listed as one of the top cocoa bean importers in Germany, accounting for a notable share of the country's total cocoa bean imports.

POTENTIAL BUYERS OR IMPORTERS

This section provides detailed information about potential or actual buyer companies in the target market, including their business profiles, product usage.

Weinrich GmbH & Co. KG (Vivani)

Chocolate manufacturer

Country: Germany

Product Usage: Imports organic and fair-trade certified cocoa beans and other cocoa ingredients for its chocolate production.

Ownership Structure: Privately owned

COMPANY PROFILE

Weinrich is a German chocolate manufacturer that produces both its own brands, such as Vivani (organic chocolate), and private label products. They are known for their focus on organic and fair-trade products.

RECENT NEWS

Weinrich is mentioned as a private label manufacturer in Germany that produces large shares of both organic and fair-trade products, such as the popular organic Vivani brand.

POTENTIAL BUYERS OR IMPORTERS

This section provides detailed information about potential or actual buyer companies in the target market, including their business profiles, product usage.

Edeka Zentrale Stiftung & Co. KG

Supermarket chain and food retailer

Country: Germany

Product Usage: Sources large volumes of chocolate and confectionery products, including private label brands, which necessitates the import of cocoa and cocoa-derived ingredients.

Ownership Structure: Cooperative group

COMPANY PROFILE

Edeka is Germany's largest supermarket chain and food retailer, operating numerous stores under various brands. It is a cooperative group supporting independent retailers.

GROUP DESCRIPTION

Largest food retailer in Germany.

RECENT NEWS

Edeka is consistently ranked as one of the top supermarket chains in Germany, with a significant market share, indicating its substantial purchasing power for food products, including those containing cocoa.

POTENTIAL BUYERS OR IMPORTERS

This section provides detailed information about potential or actual buyer companies in the target market, including their business profiles, product usage.

REWE Group

Retail and tourism group

Country: Germany

Product Usage: Sources a vast array of food products, including chocolate and confectionery, for its retail operations and private label brands, requiring the import of cocoa ingredients.

Ownership Structure: Cooperative group

COMPANY PROFILE

REWE Group is a leading German retail and tourism group, operating supermarkets, discount stores (Penny), and other retail formats. It is the second-largest supermarket chain in Germany.

RECENT NEWS

REWE is consistently listed among the top supermarket chains in Germany, with a significant turnover and store count, highlighting its role as a major buyer in the food sector.

POTENTIAL BUYERS OR IMPORTERS

This section provides detailed information about potential or actual buyer companies in the target market, including their business profiles, product usage.

Schwarz Group (Lidl & Kaufland)

Retail group

Country: Germany

Product Usage: Both Lidl and Kaufland offer a wide range of food products, including extensive private label chocolate and confectionery lines, which rely on imported cocoa and cocoa derivatives.

Ownership Structure: Privately owned

COMPANY PROFILE

The Schwarz Group is one of the largest retail groups in Europe, owning the discount supermarket chain Lidl and the hypermarket chain Kaufland.

GROUP DESCRIPTION

One of the largest retail groups in Europe.

RECENT NEWS

Lidl and Kaufland are consistently ranked among the top supermarket chains in Germany, known for their extensive product offerings and market dominance, making them significant importers of cocoa-containing products and ingredients.

POTENTIAL BUYERS OR IMPORTERS

This section provides detailed information about potential or actual buyer companies in the target market, including their business profiles, product usage.

Aldi (Nord and Süd)

Discount supermarket chain

Country: Germany

Product Usage: Aldi's extensive range of private label chocolate and confectionery products means they are significant direct or indirect importers of cocoa and cocoa ingredients.

Ownership Structure: Privately owned

COMPANY PROFILE

Aldi is a leading global discount supermarket chain, split into Aldi Nord and Aldi Süd in Germany. They are known for their focus on private label products and low prices.

GROUP DESCRIPTION

Leading global discount supermarket chain.

RECENT NEWS

Aldi is consistently identified as one of the top discount supermarket chains in Germany, with a large number of stores and a focus on own-brand products, indicating substantial purchasing volumes for cocoa-related goods.

POTENTIAL BUYERS OR IMPORTERS

This section provides detailed information about potential or actual buyer companies in the target market, including their business profiles, product usage.

Müggenburg Pflanzliche Rohstoffe GmbH & Co. KG

Plant-based raw material dealer

Country: Germany

Product Usage: Likely imports cocoa shells for further processing or distribution to industries that utilize these materials, such as for animal feed, fertilizers, or other industrial applications.

COMPANY PROFILE

Müggenburg is a company that deals with plant-based raw materials. They list "Cocoa, Shell" as one of their products. This suggests they act as a distributor or processor of cocoa by-products.

RECENT NEWS

The company explicitly lists "Cocoa, Shell" (Kakao, Schale) as a product, indicating their involvement in the trade and handling of cocoa waste.

LIST OF ABBREVIATIONS AND TERMS USED

Ad valorem tariff: An ad valorem duty (tariff, charge, and so on) is based on the value of the dutiable item and expressed in percentage terms. For example, a duty of 20 percent on the value of automobiles.

Applied tariff / Applied rates: Duties that are actually charged on imports. These can be below the bound rates.

Aggregation: A process that transforms microdata into aggregate-level information by using an aggregation function such as count, sum average or standard deviation.

Aggregated data: Data generated by aggregating non-aggregated observations according to a well- defined statistical methodology.

Approx.: Short for "approximation", which is a guess of a number that is not exact but that is close.

B: billions (e.g. US$ 10B)

CAGR: For the purpose of this report, the compound annual growth rate (CAGR) is the annualized average rate of growth of a specific indicator (e.g. imports, proxy prices) between two given years, assuming growth takes place at an exponentially compounded rate. The CAGR between given years X and Z, where Z - X = N, is the number of years between the two given years, is calculated as follows:

$$CAGR_{\text{from year X to year Z}} = \left(\frac{Value_{yearZ}}{Value_{yearX}}\right)^{(1/N)} - 1$$

Current US$: Data reported in current (or "nominal") prices for each year are measured in the prices for that particular year. For example, GDP for 1990 are based on 1990 prices, for 2020 are based on 2020 prices, and so on. Current price series are influenced by the effects of inflation.

Constant US$: Constant (or "real") price series show the data for each year in the prices of a chosen reference year. For example, reported GDP in constant 2015 prices show data for 2019, 2022, and all other years in 2015 prices. Constant price series are used to measure the true volume growth, i.e. adjusting for the effects of price inflation.

CPI, Inflation: Inflation as measured by the consumer price index reflects the annual percentage change in the cost to the average consumer of acquiring a basket of goods and services that may be fixed or changed at specified intervals, such as yearly.

Country Credit Risk Classification: The Organization for Economic Cooperation & Development (OECD) Country Risk Classification measures the country credit risk and the likelihood that a country will service its external debt. The index uses a scale of eight risk categories to determine a country's credit risk (from 0 to 7: 0 being risk free and 7 represents the highest level of country risk to service its external debt). The country risk classifications are not sovereign risk classifications and therefore should not be compared with the sovereign risk classifications of private credit rating agencies (CRAs).

Country Market: For the purpose of this report, this is the total number of all goods (in US$ or volume values) which added to the stock of material resources of a country by entering (imports) its economic territory in a certain period of time (often measured over the course of a year).

Competitors: Businesses/companies who compete against each other in the same good market. This may also refer to a country on a global level.

Domestic or foreign goods: Specification of whether the good is of domestic or foreign origin.

Domestic goods: Can be defined as goods originating in the economic territory of a country. In general, goods are considered as originating in the country if they have been wholly obtained in it or were substantially transformed.

Economic territory: The area under the effective economic control of a single government.

Estimation: Estimation is concerned with inference about the numerical value of unknown population values from incomplete data such as a sample.

Foreign goods: Are goods which originate from the rest of the world (including foreign goods in transit through the compiling country) or are obtained under the outward processing procedure, when such processing confers foreign origin (compensating products which changed origin).

Growth rates: refer to the percentage change of a specific variable within a specific time period.

GDP (current US$): Gross Domestic Product at purchaser's prices is the sum of gross value added by all resident producers in the economy plus any product taxes and minus any subsidies not included in the value of the products. It is calculated without making deductions for depreciation of fabricated assets or for depletion and degradation of natural resources. Data are in current U.S. dollars. Dollar figures for GDP are converted from domestic currencies using single year official exchange rates. For a few countries where the official exchange rate does not reflect the rate effectively applied to actual foreign exchange transactions, an alternative conversion factor is used.

LIST OF ABBREVIATIONS AND TERMS USED

GDP (constant 2015 US$): Gross Domestic Product at purchaser's prices is the sum of gross value added by all resident producers in the economy plus any product taxes and minus any subsidies not included in the value of the products. It is calculated without making deductions for depreciation of fabricated assets or for depletion and degradation of natural resources. Data are in constant 2015 prices, expressed in U.S. dollars. Dollar figures for GDP are converted from domestic currencies using 2015 official exchange rates. For a few countries where the official exchange rate does not reflect the rate effectively applied to actual foreign exchange transactions, an alternative conversion factor is used.

GDP growth (annual %): Annual percentage growth rate of GDP at market prices based on constant local currency. An economy's growth is measured by the change in the volume of its output or in the real incomes of its residents. The 2008 United Nations System of National Accounts (2008 SNA) offers three plausible indicators for calculating growth: the volume of gross domestic product (GDP), real gross domestic income, and real gross national income. The volume of GDP is the sum of value added, measured at constant prices, by households, government, and industries operating in the economy. GDP accounts for all domestic production, regardless of whether the income accrues to domestic or foreign institutions.

Goods (products): For the purpose of his report the term is defined as physical, produced objects for which a demand exists, over which ownership rights can be established and whose ownership can be transferred from one institutional unit to another by engaging in transactions on markets, plus certain types of so-called knowledge-capturing products stored on physical media that can cross borders physically.

Goods in transit: Goods are considered as simply being transported through a country if they (a) enter and leave the compiling country solely for the purpose of being transported to another country, (b) are not subject to halts not inherent to the transportation and (c) can be identified when both entering and leaving the country.

General imports and exports: Are flows of goods entering/leaving the statistical territory of a country applying the general trade system and recorded in compliance with the general and specific guidelines.

General imports consist of:

(a) Imports of foreign goods (including compensating products after outward processing which changed their origin from domestic to foreign) entering the free circulation area, premises for inward processing, industrial free zones, premises for customs warehousing or commercial free zones;

(b) Re-imports of domestic goods into the free circulation area, premises for inward processing or industrial free zones, premises for customs warehousing or commercial free zones.

General exports consist of:

(a) Exports of domestic goods (including compensating products after inward processing which changed their origin from foreign to domestic) from any part of the statistical territory, including free zones and customs warehouses;

(b) Re-exports of foreign goods from any part of the statistical territory, including free zones and customs warehouses.

Global Market: For the purpose of this report, the term represents the sum of imports (either in US$ or volume terms) of a particular good of all countries who reported these data to the UN Comtrade database. Important to mention, the term doesn't include local production of that good, which may account for a large part. Thus, the term covers only global Imports flow.

The Harmonized Commodity Description and Coding Systems (HS, Harmonized System): an internationally recognized commodity classification developed and maintained by The World Customs Organization (WCO). The system is used by more than 200 countries and economies as a basis for their Customs tariffs and for the collection of international trade statistics. Over 98 % of the merchandise in international trade is classified in terms of the HS. The HS comprises over 5,600 separate groups of goods identified by a 6-digit code, arranged in 99 chapters, grouped in 21 sections.

HS Code: At the international level, the Harmonized System for classifying goods is a six-digit code system (HS code, Commodity Code, Product Code), which can be broken down into three parts. The first two digits (HS-2) identify the chapter the goods are classified in, e.g., 01 Animals; live. The next two digits (HS-4) identify groupings within that chapter (the heading), e.g., 0104 - Sheep and goats; live. The following two digits (HS-6) are even more specific (the subheading), e.g., 010410 - Sheep; live. Up to the HS-6 digit level, all countries classify products in the same way (a few exceptions exist where some countries apply old versions of the HS).

Imports penetration: Import penetration ratios are defined as the ratio between the value of imports as a percentage of total domestic demand. The import penetration rate shows to what degree domestic demand D is satisfied by imports M. It is calculated as M/D, where the domestic demand is the GDP minus exports plus imports i.e. [D = GDP-X+M]. From a macroeconomic perspective, a country that produces manufactured goods with a high degree of international competitiveness will see decreasing imports. Under these circumstances, the import penetration rate will fall. Conversely, a country that produces manufactured goods with a low degree of international competitiveness will see increasing imports. In this case, the import penetration will rise. It must be noted, however, that the relationship described here does not always hold. Two factors – Import barriers and transaction costs – may interfere with it. If a country has established import barriers, another country's comparatively better manufactured goods will have little impact on its imports, and its import penetration rate will not rise. Likewise, if transportation and other transaction costs are extremely high for traded goods, differences in international competitiveness may not be reflected in the import penetration rate.

LIST OF ABBREVIATIONS AND TERMS USED

International merchandise trade statistics: Refers to both foreign (or external) merchandise trade statistics as compiled by countries and international merchandise trade statistics as represented by the consolidated and standardized country data sets that are compiled and maintained by the international or regional agencies.

Importer/exporter: In general, refers to the party in the customs territory who signed the contract of purchase/sale and/or who is responsible for executing the contract (i.e., the agent responsible for effecting import into or export from a country). Each importer or exporter is usually assigned a unique identification number.

Imports volume: The number or amount of Imports in general, typically measured in kilograms.

Imputation: Procedure for entering a value for a specific data item where the response is missing or unusable.

Imports value: The price actually paid for all imported units (by quantity unit) of the given commodity (unit price multiplied by quantity), or the cost of the commodity if not sold or purchased.

Institutional unit: The elementary economic decision-making center characterized by uniformity of behavior and decision-making autonomy in the exercise of its principal function.

K: thousand (e.g. US$ 10K)

Ktons: thousand tons (e.g. 1 Ktons)

LTM: For the purpose of this report, LTM means Last Twelve Months for which the trade data are available. This period may not coincide with calendar period though, which is often the case with the trade data.

Long-term growth rate: For the purpose of this report, it is a metric that is used to express the change in a variable, represented as a percentage, ans is used interchangeably with CAGR.

Long-Term: For the purpose of this report, it is equivalent to a period used for calculation of CAGR.

M: million (e.g. US$ 10M)

Market: For the purpose of this report the terms Market and Imports may be used interchangeably, since both refer to a particular good which is bought and sold in particular country. The distinctive feature is that the Market term includes only imports of a particular good to a particular country. It does not include domestic production of such good or anything else.

Microdata: Data on the characteristics of individual transactions collected by customs or other sources (such as administrative records or surveys) or estimated.

Macrodata: Data derived from microdata by grouping or aggregating them, such as total exports of goods classified in a particular HS subheading.

Mirror statistics: Mirror statistics are used to conduct bilateral comparisons of two basic measures of a trade flow and are a traditional tool for detecting the causes of asymmetries in statistics.

Mean value: The arithmetic mean, also known as "arithmetic average", is a measure of central tendency of a finite set of numbers: specifically, the sum of the values divided by the number of values.

Median value: Is the value separating the higher half from the lower half of a data sample, a population, or a probability distribution.

Marginal Propensity to Import: Is the amount imports increase or decrease with each unit rise or decline in disposable income. The idea is that rising income for businesses and households spurs greater demand for goods from abroad and vice versa.

Trade Freedom Classification: Trade freedom is a composite measure of the absence of tariff and non-tariff barriers that affect imports and exports of goods and services. The trade freedom score is based on two inputs:

The trade-weighted average tariff rate and

Non-tariff barriers (NTBs).

For more information on the methodology, please, visit: https://www.heritage.org/index/trade-freedom

Market size (Market volumes): For the purpose of this report, it refers to the total number of specific good (in US$ or volume values) which added to the stock of relevant material resources in a certain period of time (often measured over the course of a year). This term may refer to country, region, or world (global) levels.

Net weight (kilograms): the net shipping weight, excluding the weight of packages or containers.

LIST OF ABBREVIATIONS AND TERMS USED

OECD: The Organisation for Economic Co-operation and Development (OECD) is an intergovernmental organisation with 38 member countries, founded in 1961 to stimulate economic progress and world trade. It is a forum whose member countries describe themselves as committed to democracy and the market economy, providing a platform to compare policy experiences, seek answers to common problems, identify good practices, and coordinate domestic and international policies of its members. The majority of OECD Members are high-income economies ranked as "very high" in the Human Development Index, and are regarded as developed countries. Their collective population is 1.38 billion. As of 2017, OECD Member countries collectively comprised 62.2% of global nominal GDP (USD 49.6 trillion) and 42.8% of global GDP (Int$54.2 trillion) at purchasing power parity.

The OECD Country Risk Classification measures the country credit risk and the likelihood that a country will service its external debt. The index uses a scale of eight risk categories to determine a country's credit risk, with 0 representing the lowest level of country risk. For more information, visit https://www.oecd.org/

Official statistics: Statistics produced in accordance with the Fundamental Principles of Official Statistics by a national statistical office or by another producer of official statistics that has been mandated by the national government or certified by the national statistical office to compile statistics for its specific domain.

Proxy price: For the purpose of this report, the term is a broad representation of actual price of a specific good in a specific market. Proxy price acts as a substitute for actual price for the reason of being calculated rather than obtained from the market directly. Proxy price implies very closer meaning as unit values used in international trade statistics.

Prices: For the purpose of this report the term always refers to prices on imported goods, except for explicit definitions, e.g. consumer price index.

Production: Economic production may be defined as an activity carried out under the control and responsibility of an institutional unit that uses inputs of labor, capital, and goods and services to produce outputs of goods or services.

Physical volumes: For the purpose of this report, this term indicates foreign trade (imports or exports flows) denominated in units of measure of weight, typically in kilograms.

Quantity units (Volume terms): refer to physical characteristics of goods. The use of appropriate quantity units may also result in more internationally comparable data on international movements of goods, because differences in quantity measurements between the importing country and the exporting country can be less significant than in value measurements. Therefore, quantities are often used in checking the reliability of the value data via the calculation of so-called unit values (value divided by quantity). It is recommended that countries collect or estimate, validate and report quantity information in the World Customs Organization (WCO) standard units of quantity (e.g. kilograms) and in net weight (i.e. not including packaging) on all trade transactions.

RCA Index: Revealed Comparative Advantage Index Comparative advantage underlies economists' explanations for the observed pattern of inter-industry trade. In theoretical models, comparative advantage is expressed in terms of relative prices evaluated in the absence of trade. Since these are not observed, in practice we measure comparative advantage indirectly. Revealed comparative advantage indices (RCA) use the trade pattern to identify the sectors in which an economy has a comparative advantage, by comparing the country of interests' trade profile with the world average. The RCA index is defined as the ratio of two shares. The numerator is the share of a country's total exports of the commodity of interest in its total exports. The denominator is share of world exports of the same commodity in total world exports.

$$RSA = \frac{\sum_d x_{isd} \Big/ \sum_d X_{sd}}{\sum_{wd} x_{iwd} \Big/ \sum_{wd} X_{wd}},$$

where
s is the country of interest,
d and **w** are the set of all countries in the world,
i is the sector of interest,
x is the commodity export flow and
X is the total export flow.

The numerator is the share of good i in the exports of country s, while the denominator is the share of good i in the exports of the world.

Re-imports: Are imports of domestic goods which were previously recorded as exports.

Re-exports: Are exports of foreign goods which were previously recorded as imports.

LIST OF ABBREVIATIONS AND TERMS USED

Real Effective Exchange Rate (REER): It is an indicator of a nation's competitiveness in relation to its trading partners. It is a measure of the relative strength of a nation's currency in comparison with those of the nations it trades with. It is used to judge whether the nation's currency is undervalued or overvalued or, ideally, fairly valued. Economists use REER to evaluate a country's trade flow and analyze the impact that factors such as competition and technological changes are having on a country and its economy. An increase in a nation's REER means businesses and consumers have to pay more for the products they export, while their own people are paying less for the products that it imports. It is losing its trade competitiveness, but the environment gets more favorable to Imports.

Short-term growth rate: For the purpose of this report, it is a metric that is used to express the change in a variable, represented as a percentage, and used interchangeably with LTM.

Statistical data: Data collected, processed or disseminated by a statistical organization for statistical purposes.

Seasonal adjustment: Statistical method for removing the seasonal component of a time series.

Seasonal component: Fluctuations in a time series that exhibit a regular pattern at a particular time during the course of a year which are similar from one year to another.

Short-Term: For the purpose of this report, it is equivalent to the LTM period.

T: tons (e.g. 1T)

Trade statistics: For the purposes of this report, the term will be used to refer to international, foreign or external merchandise trade statistics, unless otherwise indicated, and the term “merchandise” has the same meaning as the terms, “products”, “goods” and “commodities”.

Total value: The price actually paid for all units (by quantity unit) of the given commodity (unit price multiplied by quantity), or the cost of the commodity if not sold or purchased.

Re-exports: Are exports of foreign goods which were previously recorded as imports.

Time series: A set of values of a particular variable at consecutive periods of time.

Tariff binding: Maximum duty level on a product listed in a member's schedule of commitments; it represents the commitment not to exceed the duty applied on the concerned product beyond the level bound in the schedule. Once a rate of duty is bound, it may not be raised without compensating the affected parties. For developed countries, the bound rates are generally the rates actually charged. Most developing countries have bound the rates somewhat higher than the actual rates charged, so the bound rates serve as ceilings.

The terms of trade (ToT): is the relative price of exports in terms of imports and is defined as the ratio of export prices to import prices. It can be interpreted as the amount of import goods an economy can purchase per unit of export goods. An improvement of a nation's terms of trade benefits that country in the sense that it can buy more imports for any given level of exports. The terms of trade may be influenced by the exchange rate because a rise in the value of a country's currency lowers the domestic prices of its imports but may not directly affect the prices of the commodities it exports.

Trade Dependence, %GDP: Is the sum of exports and imports of goods and services measured as a share of gross domestic product. This indicator shows to what extent the country's economy relies on foreign trade as compared to its GDP.

US$: US dollars

WTO: the World Trade Organization (WTO) is an intergovernmental organization that regulates and facilitates international trade. The World Trade Organization (WTO) is the only global international organization dealing with the rules of trade between nations. At its heart are the WTO agreements, negotiated and signed by the bulk of the world’s trading nations and ratified in their parliaments. The goal is to ensure that trade flows as smoothly, predictably and freely as possible. With effective cooperation in the United Nations System, governments use the organization to establish, revise, and enforce the rules that govern international trade. It officially commenced operations on 1 January 1995, pursuant to the 1994 Marrakesh Agreement, thus replacing the General Agreement on Tariffs and Trade (GATT) that had been established in 1948. The WTO is the world's largest international economic organization, with 164 member states representing over 98% of global trade and global GDP.

Y: year (e.g. 5Y – five years)

Y-o-Y: Year-over-year (YOY) is a financial term used to compare data for a specific period of time with the corresponding period from the previous year. It is a way to analyze and assess the growth or decline of a particular variable over a twelve-month period.

METHODOLOGY

Following is a list of use cases of application of specific words combinations across the report. The selection is based on calculated values of corresponding indicators.

1. **Country Market Trend:**
   - In case the calculated growth rates for the LTM period exceeded the value of 5Y CAGR by 0.5 percentage points or more, then **"surpassed"** is used, if it was 0.5 percentage points or more lower than 5Y CAGR then it is **"underperformed"**. In case, if the calculated growth rate for the LTM period was within the interval of 5Y CAGR +- 5 percentage points (including boundary values), then either **"followed"** or **"was comparable to"** is used.
2. **Global Market Trends US$-terms:**
   - If the "Global Market US$-terms CAGR, %" value was less than 0%, the **"declining"** is used,
   - If the "Global Market US$-terms CAGR, %" value was more than or equal to 0% and less than 4%, then **"stable"** is used,
   - If the "Global Market US$-terms CAGR, %" value was more than or equal to 4% and less than 6%, then **"growing"** is used,
   - If the "Global Market US$-terms CAGR, %" value was more than 6%, then **"fast growing"** is used.
3. **Global Market Trends t-terms:**
   - If the "Global Market t-terms CAGR, %" value was less than 0%, the **"declining"** is used,
   - If the "Global Market t-terms CAGR, %" value was more than or equal to 0% and less than 4%, then **"stable"** is used,
   - If the "Global Market t-terms CAGR, %" value was more than or equal to 4% and less than 6%, then **"growing"** is used,
   - If the "Global Market t-terms CAGR, %" value was more than 6%, then **"fast growing"** is used.
4. **Global Demand for Imports:**
   - If the calculation of the change in share of a specific product in the total imports of the country was more than 0.5 percentage points, then the **"growing"** was used,
   - If the calculation of the change in share of a specific product in the total imports of the country was less than 0.5%, then the **"declining"** was used,
   - If the calculation of the change in share of a specific product in the total imports of the country was within the range of +- 0.5% (including boundary values), then the **"remain stable"** was used,
5. **Long-term market drivers:**
   - **"Growth in Prices accompanied by the growth in Demand"** is used, if the "Global Market t-terms CAGR, %" was more than 2% and the "Inflation 5Y average" was more than 0% and the "Inflation contribution to US$-term CAGR%" was more than 50%,
   - **"Growth in Demand"** is used, if the "Global Market t-terms CAGR, %" was more than 2% and the "Inflation 5Y average" was more than 0% and the "Inflation contribution to US$-term CAGR%" was less than or equal to 50%,
   - **"Growth in Prices"** is used, if the "Global Market t-terms CAGR, %" was more than 0% or less than or equal to 2%, and the "Inflation 5Y average" was more than 4%,
   - **"Stable Demand and stable Prices"** is used, if the "Global Market t-terms CAGR, %" was more than or equal to 0%, and the "Inflation 5Y average" was more than of equal to 0% and less than or equal to 4%,
   - **"Growth in Demand accompanied by declining Prices"** is used, if the "Global Market t-terms CAGR, %" was more than 0%, and the "Inflation 5Y average" was less than 0%,
   - **"Decline in Demand accompanied by growing Prices"** is used, if the "Global Market t-terms CAGR, %" was less than 0%, and the "Inflation 5Y average" was more than 0%,
   - **"Decline in Demand accompanied by declining Prices"** is used, if the "Global Market t-terms CAGR, %" was less than 0%, and the "Inflation 5Y average" was less than 0%,
6. **Rank of the country in the World by the size of GDP:**
   - **"Largest economy"**, if GDP (current US$) is more than 1,800.0 B,
   - **"Large economy"**, if GDP (current US$) is less than 1,800.0 B and more than 1,000.0 B,
   - **"Midsize economy"**, if GDP (current US$) is more than 500,0.0 B and less than 1,000.0 B,
   - **"Small economy"**, if GDP (current US$) is more than 50.0 B and less than 500.0 B,
   - **"Smallest economy"**, if GDP (current US$) is less than 50.0 B,
   - **"Impossible to define due to lack of data"**, if the country didn't provide data.

7. **Economy Short Term Growth Pattern:**
   - **"Fastest growing economy"**, if GDP growth (annual %) is more than 17%,
   - **"Fast growing economy"**, if GDP growth (annual %) is less than 17% and more than 10%,
   - **"Higher rates of economic growth"**, if GDP growth (annual %) is more than 5% and less than 10%,
   - **"Moderate rates of economic growth"**, if GDP growth (annual %) is more than 3% and less than 5%,
   - **"Slowly growing economy"**, if GDP growth (annual %) is more than 0% and less than 3%,
   - **"Economic decline"**, if GDP growth (annual %) is between -5 and 0%,
   - **"Economic collapse"**, if GDP growth (annual %) is less than -5%,
   - **"Impossible to define due to lack of data"**, if the country didn't provide data.

8. **Classification of countries in accordance to income level.** The methodology has been provided by the World Bank, which classifies countries in the following groups:
   - **low-income economies** are defined as those with a GNI per capita, calculated using the World Bank Atlas method, of $1,135 or less in 2022,
   - **lower middle-income economies** are those with a GNI per capita between $1,136 and $4,465,
   - **upper middle-income economies** are those with a GNI per capita between $4,466 and $13,845,
   - **high-income economies** are those with a GNI per capita of $13,846 or more,
   - **"Impossible to define due to lack of data"**, if the country didn't provide data.

For more information, visit https://datahelpdesk.worldbank.org

9. **Population growth pattern:**
   - **"Quick growth in population"**, in case annual population growth is more than 2%,
   - **"Moderate growth in population"**, in case annual population growth is more than 0% and less than 2%,
   - **"Population decrease"**, in case annual population growth is less than 0% and more than -5%,
   - **"Extreme slide in population"**, in case annual population growth is less than -5%,
   - **"Impossible to define due to lack of data"**, in case there are not enough data.

10. **Short-Term Imports Growth Pattern:**
   - **"Extremely high growth rates"**, in case if Imports of goods and services (annual % growth) is more than 20%,
   - **"High growth rates"**, in case if Imports of goods and services (annual % growth) is more than 10% and less than 20%,
   - **"Stable growth rates"**, in case if Imports of goods and services (annual % growth) is more than 0% and less than 10%,
   - **"Moderately decreasing growth rates"**, in case if Imports of goods and services (annual % growth) is less than 0% and more than -10%,
   - **"Extremely decreasing growth rates"**, in case if Imports of goods and services (annual % growth) is less than -10%,
   - **"Impossible to define due to lack of data"**, in case there are not enough data.

11. **Country's Short-Term Reliance on Imports:**
   - **"Extreme reliance"**, in case if Imports of goods and services (% of GDP) is more than 100%,
   - **"High level of reliance"**, in case if Imports of goods and services (% of GDP) is more than 50% and less than 100%,
   - **"Moderate reliance"**, in case if Imports of goods and services (% of GDP) is more than 30% and less than 50%,
   - **"Low level of reliance"**, in case if Imports of goods and services (% of GDP) is more than 10% and less than 30%,
   - **"Practically self-reliant"**, in case if Imports of goods and services (% of GDP) is more than 0% and less than 10%,
   - **"Impossible to define due to lack of data"**, in case there are not enough data.

12. **Short-Term Inflation Profile:**
   - **"Extreme level of inflation"**, in case if Inflation, consumer prices (annual %) is more than 40%,
   - **"High level of inflation"**, in case if Inflation, consumer prices (annual %) is more than 20% and less than 40%,
   - **"Elevated level of inflation"**, in case if Inflation, consumer prices (annual %) is more than 10% and less than 20%,
   - **"Moderate level of inflation"**, in case if Inflation, consumer prices (annual %) is more than 4% and less than 10%,
   - **"Low level of inflation"**, in case if Inflation, consumer prices (annual %) is more than 0% and less than 4%,
   - **"Deflation"**, in case if Inflation, consumer prices (annual %) is less than 0%,
   - **"Impossible to define due to lack of data"**, in case there are not enough data.

13. **Long-Term Inflation Profile:**
    - **"Inadequate inflationary environment"**, in case if Consumer price index (2010 = 100) is more than 10,000%,
    - **"Extreme inflationary environment"**, in case if Consumer price index (2010 = 100) is more than 1,000% and less than 10,000%,
    - **"Highly inflationary environment"**, in case if Consumer price index (2010 = 100) is more than 500% and less than 1,000%,
    - **"Moderate inflationary environment"**, in case if Consumer price index (2010 = 100) is more than 200% and less than 500%,
    - **"Low inflationary environment"**, in case if Consumer price index (2010 = 100) is more than 150% and less than 200%,
    - **"Very low inflationary environment"**, in case if Consumer price index (2010 = 100) is more 100% and less than 150%,
    - **"Impossible to define due to lack of data"**, in case there are not enough data.
14. **Short-term ForEx and Terms of Trade environment:**
    - **"More attractive for imports"**, in case if the change in Real effective exchange rate index (2010 = 100) is more than 0,
    - **"Less attractive for imports"**, in case if the change in Real effective exchange rate index (2010 = 100) is less than 0,
    - **"Impossible to define due to lack of data"**, in case there are not enough data.
15. **The OECD Country Risk Classification:**
    - **"Risk free country to service its external debt"**, in case if the OECD Country risk index equals to 0,
    - **"The lowest level of country risk to service its external debt"**, in case if the OECD Country risk index equals to 1,
    - **"Low level of country risk to service its external debt"**, in case if the OECD Country risk index equals to 2,
    - **"Somewhat low level of country risk to service its external debt"**, in case if the OECD Country risk index equals to 3,
    - **"Moderate level of country risk to service its external debt"**, in case if the OECD Country risk index equals to 4,
    - **"Elevated level of country risk to service its external debt"**, in case if the OECD Country risk index equals to 5,
    - **"High level of country risk to service its external debt"**, in case if the OECD Country risk index equals to 6,
    - **"The highest level of country risk to service its external debt"**, in case if the OECD Country risk index equals to 7,
    - **"Micro state: not reviewed or classified"**, in case of Andorra, Morocco, San Marino, because these are very small countries that do not generally receive official export credit support.
    - **"High Income OECD country"**: not reviewed or classified", in case of Australia, Austria, Belgium, Croatia, Cyprus, Canada, Chile, Czechia, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Japan, Korea, Rep., Latvia, Lithuania, Luxembourg, Malta, Netherlands, New Zealand, Norway, Poland, Portugal, Slovak Republic, Slovenia, Spain, Sweden, Switzerland, United Kingdom, United States, because these are high income OECD countries and other high income Euro zone countries that are not typically classified.
    - **"Currently not reviewed or classified"**, in case of Barbados, Belize, Brunei Darussalam, Comoros, Dominica, Grenada, Kiribati, Liechtenstein, Macao SAR, China, Marshall Islands, Micronesia, Fed. Sts., Nauru, Palau, St. Kitts and Nevis, St. Lucia, St. Vincent and the Grenadines, Samoa, Sao Tome and Principe, Seychelles, Sint Maarten, Solomon Islands, Tonga, Tuvalu, Vanuatu, because these countries haven't been classified.
    - **"There are no data for the country"**, in case if the country is not being classified.

16. **Trade Freedom Classification.** The Index of Economic Freedom is a tool for analyzing 184 economies throughout the world. It measures economic freedom based on 12 quantitative and qualitative factors, grouped into four broad categories, or pillars, of economic freedom: (1) Rule of Law (property rights, government integrity, judicial effectiveness), (2) Government Size (government spending, tax burden, fiscal health), (3) Regulatory Efficiency (business freedom, labor freedom, monetary freedom), (4) Open Markets (trade freedom, investment freedom, financial freedom). For the purpose of this report we use the Trade freedom subindex to reflect country's position in the world with respect to international trade.
    - **"Repressed"**, in case if the Trade freedom subindex is less than or equal to 50 and more than 0,
    - **"Mostly unfree"**, in case if the Trade freedom subindex is less than or equal to 60 and more than 50,
    - **"Moderately free"**, in case if the Trade freedom subindex is less than or equal to 70 and more than 60,
    - **"Mostly free"**, in case if the Trade freedom subindex is less than or equal to 80 and more than 70,
    - **"Free"**, in case if the Trade freedom subindex is less than or equal to 100 and more than 80,
    - **"There are no data for the country"**, in case if the country is not being classified.

17. **The competition landscape / level of risk to export to the specified country:**
    - **"risk free with a low level of competition from domestic producers of similar products"**, in case if the RCA index of the specified product falls into the 90th quantile,
    - **"somewhat risk tolerable with a moderate level of local competition"**, in case if the RCA index of the specified product falls into the range between the 90th and 92nd quantile,
    - **"risk intense with an elevated level of local competition"**, in case if the RCA index of the specified product falls into the range between the 92nd and 95th quantile,
    - **"risk intense with a high level of local competition"**, in case if the RCA index of the specified product falls into the range between the 95th and 98th quantile,
    - **"highly risky with extreme level of local competition or monopoly"**, in case if the RCA index of the specified product falls into the range between the 98th and 100th quantile,
    - **"Impossible to define due to lack of data"**, in case there are not enough data.
18. **Capabilities of the local businesses to produce similar competitive products:**
    - **"low"**, in case the competition landscape is risk free with a low level of competition from domestic producers of similar products,
    - **"moderate"**, in case the competition landscape is somewhat risk tolerable with a moderate level of local competition,
    - **"promising"**, in case the competition landscape is risk intense with an elevated level of local competition or risk intense with a high level of local competition,
    - **"high"**, in case the competition landscape is highly risky with extreme level of local competition or monopoly,
    - **"Impossible to define due to lack of data"**, in case there are not enough data.
19. **The strength of the effect of imports of particular product to a specified country:**
    - **"low"**, in case if the share of the specific product is less than 0.1% in the total imports of the country,
    - **"moderate"**, in case if the share of the specific product is more than or equal to 0.1% and less than 0.5% in the total imports of the country,
    - **"high"**, in case if the share of the specific product is equal or more than 0.5% in the total imports of the country.
20. **A general trend for the change in the proxy price:**
    - **"growing"**, in case if 5Y CAGR of the average proxy prices, or growth of the average proxy prices in LTM is more than 0,
    - **"declining"**, in case if 5Y CAGR of the average proxy prices, ot growth of the average proxy prices in LTM is less than 0,
21. **The aggregated country's ranking to determine the entry potential of this product market:**
    - **Scores 1-5:** Signifying high risks associated with market entry,
    - **Scores 6-8:** Indicating an uncertain probability of successful entry into the market,
    - **Scores 9-11:** Suggesting relatively good chances for successful market entry,
    - **Scores 12-14:** Pointing towards high chances of a successful market entry.
22. **Global market size annual growth rate, the best-performing calendar year:**
    - **"Growth in Prices accompanied by the growth in Demand"** is used, if the "Country Market t-term growth rate, %" was more than 2% and the "Inflation growth rate, %" was more than 0% and the "Inflation contribution to $-term growth rate, %" was more than 50%,
    - **"Growth in Demand"** is used, if the "Country Market t-term growth rate, %" was more than 2% and the "Inflation growth rate, %" was more than 0% and the "Inflation contribution to $-term growth rate, %" was less than or equal to 50%,
    - **"Growth in Prices"** is used, if the "Country Market t-term growth rate, %" was more than 0% and less than or equal to 2%, and the "Inflation growth rate, %" was more than 4%,
    - **"Stable Demand and stable Prices"** is used, if the "Country Market t-term growth rate, %" was more than or equal to 0% and less than or equal to 2%, and the "Inflation growth rate, %" was more than of equal to 0% and less than or equal to 4%,
    - **"Growth in Demand accompanied by declining Prices"** is used, if the "Country Market t-term growth rate, %" was more than 0%, and the "Inflation growth rate, %" was less than 0%,
    - **"Decline in Demand accompanied by growing Prices"** is used, if the "Country Market t-term growth rate, %" was less than 0%, and the "Inflation growth rate, %" was more than 0%.

23. **Global market size annual growth rate, the worst-performing calendar year:**

- **"Declining average prices"** is used if "Country Market t term growth rate, % is more than 0%, and "Inflation growth rate, %" is less than 0%
- **"Low average price growth"** is used if "Country Market t term growth rate, % is more than 0%, and "Inflation growth rate, %" is more than 0%,
- **"Biggest drop in import volumes with low average price growth"** is used if "Country Market t term growth rate, % is less than 0%, and "Inflation growth rate, %" is more than 0%,
- **"Decline in Demand accompanied by decline in Prices"** is used if "Country Market t term growth rate, % is less than 0%, and "Inflation growth rate, %" is less than 0%.

24. **TOP-5 Countries Ranking:**
Top-10 biggest suppliers in last calendar year are being ranked according to 4 components:

1. share in imports in LTM,
2. proxy price in LTM,
3. change of imports in US$-terms in LTM, and
4. change of imports in volume terms in LTM

Each of the four components ranges from 1 to 10, with 10 being the highest. The aggregated score is being formed as a sum of scores of ranking of each component. However, in case if countries get similar scores, the ranking of the first component prevails in selection.

25. **Export potential:**
As a part of risks estimation component and business potential of export to the country, a system of ranking has been introduced. It helps to rank a country based on a set of macroeconomic and market / sectoral parameters covered in this report. Seven ranking components have been selected:

1. Long-term trends of Global Demand for Imports (refer to pages 17-20 of the report)
2. Strength of the Demand for Imports in the selected country (refer to pages 22-23 of the report)
3. Macroeconomic risks for Imports in the selected country (refer to pages 22-23 of the report)
4. Market entry barriers and domestic competition pressures for imports of the good (refer to pages 22-24 of the report)
5. Long-term trends of Country Market (refer to pages 26-29 of the report)
6. Short-term trends of Country Market, US$-terms (refer to pages 30-31 of the report)
7. Short-term trends of Country Market, volumes and proxy prices (refer to pages 32-35 of the report)

Each component includes 4-6 specific parameters. All parameters are evaluated on a scale from 0 to 6, with 0 being the lowest/ less favorable value or characteristic. An aggregated rank is a total country's score that includes scores of each specific ranking component. Each component is evaluated on a scale from 0 to 2, with 0 being the lowest score. The highest possible aggregated country's score is 14 points (up to 2 points for each of 7 ranking components). Aggregated country's rank is a sum of points gained for each ranking component. It ranges from 0 to 14 points. An aggregated rank describes risks and imports potential of the selected country with the selected product.

26. **Market volume that may be captured in the mid-term:**
The result of the market research is an approximation of the potential supply volume for the specific product in the designated market, provided the continuation of the identified trends in the future. The potential supply volume comprises two components:

1. **Component 1** is related to the ongoing trend in market development. The calculation is based on the anticipated average monthly market growth, derived from the trend observed over the past 24 months (you can find this trend currently calculated for tons on the report page 32). The assumption is that the identified trend will remain unchanged, and the calculated average monthly increase is applied to actual data on the volume of average monthly import supplies over the last 12 months, along with the corresponding average price. Simultaneously, the computation is based on the idea that a new supplier could secure a market share equivalent to the average share held by the top 10 largest suppliers in this market over the past 12 months: The potential supply in dollars per month for a new player, according to Component 1, is calculated by multiplying the following factors: Average monthly volume of imports into the country in tons × Average monthly increase in imports over the last 24 months (month-on-month growth) × Average market share for the top 10 supplying countries × Average import price over the last 12 months Component 1 could be zero in the event of a negative short-term trend in imports of the specified product into the country over the past 24 months.

2. **Component 2** signifies the extra potential supply linked to the potential strong competitive advantage of the new supplier. Its calculation is based on the factual parameters of supplying countries that have experienced the highest growth in their supplies to the chosen country over the past 12 months. The assumption is that this increase is attributed to their respective competitive advantages. The potential supply volume in dollars per month for a new player, based on Component 2, is calculated by dividing the average increase in imports in tons over the last 12 months compared to the previous 12 months for the top 5 countries that have most increased imports into the country by 12 months. The result is then multiplied by the average import price over the last 12 months.

The total increase is determined by summing the values obtained from the two components.

CONTACTS & FEEDBACK

We encourage you to stay with us, as we continue to develop and add new features to GTAIC. Market forecasts, global value chains research, deeper country insights, and other features are coming soon.

If you have any ideas on the scope of the report or any comment on the service, please let us know by e-mailing to sales@gtaic.ai. We are open for any comments, good or bad, since we believe any feedback will help us develop and bring more value to our clients.
